RE: Comments on the Draft Proposed Plan for Treatment and Final Disposal of Waste at the Weldon Spring Site.

Mr. McCracken

I write at the behest of the Board of Education of the Francis Howell School District following a presentation/review of the referenced plan by Mr. Donald J. McQueen of Shannon & Wilson Inc.

I submit the following list of recommendations as a school district response to the referenced plan.

a. The rate of clean up should be accelerated.

b. The critical elements of the plan should be conducted during non-school hours; that is, prior to and after normal school hours, on weekends and during school breaks.

c. The process addressing ground water contamination in the Femme Osage Slough should be accelerated.

We appreciate your consideration of the recommendations and commend you for the creation of a proposed plan which appears to significantly minimize hazards.

Sincerely

Daniel T. Brown
