REVIEWED FOR CLASSIFICATION/UCNI
By Mary A. Jurza UNU
Date 12-14-94

PRINTED ON RECYCLED PAPER

APPENDIX A

Appendix A contains copies of the original data forms generated by technicians from EG&G's Radiological Control and Industrial Hygiene organizations during the pre-rinsate smear sampling and the post-rinsate final radiological surveys. The data forms are presented in this appendix grouped by IHSS.

EG&G ROCKY FLATS

INTEROFFICE CORRESPONDENCE

DATE: November 30, 1993

TO: R. T. Stagner, 800 Area Operations, Bldg. 881, X5395

FROM: M. D. Schreckengast, Industrial Hygiene, Bldg. T452G, X6790

SUBJECT: BERYLLIUM SMEAR RESULTS FOR BUILDING 865, ROOM 145, INDIVIDUAL HAZARDOUS SUBSTANCE SITE (IHSS) 179 - MDS-025-93

Introduction:

Within the past few months, Phase I Resource Conservation and Recovery Act Facility Investigation/Remedial Investigation [RFI/RI] work has been conducted on the Operable Unit (OU) 15 project. Included in OU 15 is the drum storage area deemed Individual Hazardous Substance Site (IHSS) 179, in Building 865, Room 145. Phase I work involves several activities in each of the IHSSs, including an initial pre-job smear survey, a second pre-job smear survey, hot water rinsate sampling, and a post-job smear survey. Because Room 145 of Building 865 is a beryllium area, all smears are analyzed for beryllium. This letter details those results.

Conclusion:

All three smear surveys indicated beryllium levels above the 25 micrograms per square foot (ug/ft^2) beryllium smear control level. Access to the area should be restricted and this area must be decontaminated and re-smeared in order to verify beryllium removal.

Findings/Discussion:

On September 8, 1993, Radiological Operations conducted the initial pre-job survey at IHSS 179 in Building 865, Room 145. The area of study was initially divided into 33 square meters. During the initial pre-job survey, however, it was evident that there were not 33 square meters to smear. Therefore, Radiological Operations obtained 33 smears which approximated the original diagram as closely as possible. Please refer to the map provided in Attachment 1. In addition, smears taken on equipment leaving the area were also counted for beryllium. These smears were numbered 34-38. Please refer to the results provided in Attachment 2. After this survey, the grid pattern was altered and 22 square meter areas instead of 33 were identified for sampling.

On September 9, 1993, Radiological Operations conducted the second pre-job survey. Please refer to the map provided in Attachment 3 and the results provided in Attachment 4.

After this survey, hot water rinsate sampling was performed by ERM-Rocky Mountain over all 22 identified sample square meter areas. Lastly, the post-job smear survey was conducted by Radiological Operations on September 16, 1993. Please refer to the results provided in Attachment 5.

Health and Safety Practices Manual (HSP) Chapter 13.04, Beryllium Protection Program, establishes 25 micrograms of beryllium per square foot (ug/ft^2) as the beryllium smear control level. Six smears from the initial pre-job survey, four from the second pre-job survey, and two from the post-job survey indicated beryllium levels above the 25 ug/ft^2 beryllium smear control level. Results from the three surveys were not entirely consistent as to location of contamination. Reasons for these discrepancies may include current building foot traffic spreading/moving contamination, different locations of the smear areas inside the square meter areas, etc.

HSP-13.04 requires that areas having levels above 25 ug/ft^2 be decontaminated, and then re-smeared and re-counted for beryllium. Please mark the area with tape, barriers, etc., to eliminate spread of the contamination; and arrange for decontamination and another smear survey to verify decontamination.

If you have any questions or concerns, please contact me at Extension 6790.

EG&G ROCKY FLATS

INTEROFFICE CORRESPONDENCE

DATE: October 6, 1993

TO: D. L. Schubbe, Remediations Projects Mgmt., Bldg. 080, X8709
M.D.S.

FROM: M. D. Schreckengast, Industrial Hygiene, Bldg. T452G, X6790

SUBJECT: BERYLLIUM SMEAR RESULTS FOR BUILDING 883, ROOM 104 - MDS-013-93

This letter details results of the beryllium smear surveys collected in Building 883, Room 104 (Individual Hazardous Substance Site [IHSS] ~~104~~).180

On August 25, 1993, 54 smears were collected by Radiological Operations during the initial pre-job survey (see Attachment 1 for the map and Attachment 2 for smear results). Four of these 54 smears taken indicated beryllium above the beryllium smear control level of 25 micrograms per square foot (ug/ft^2), as stipulated in the Rocky Flats Plant Beryllium Protection Program, 1-15310-HSP-13.04.

On August 26, 1993, the second pre-job survey was conducted by Radiological Operations. Prior to this survey, the survey grid pattern was altered to include 49 square meter areas instead of 55 (see Attachment 3 for the map and Attachment 4 for smear results). Five of the 49 smears indicated beryllium above the beryllium smear control level.

On September 7, 1993, the post-job smear survey was performed by Radiological Operations. Nine of the 49 smears indicated significantly higher levels of beryllium (see Attachment 5).

Because post-job survey smears indicated beryllium levels above 25 ug/ft^2, building personnel are required to decontaminate the area and re-smear for beryllium. R. T. Stagner, 883 Building Manager, has been notified of these requirements.

If you have any questions regarding this matter, please feel free to call me.

"COMPUTER-GENERATED; NO MANUAL CHANGES ALLOWED"

APPENDIX B

Appendix B contains a copy of EG&G SOP FO.27 (Collection of Floor/Equipment Hot Water Rinsate Samples). The SOP was developed specifically for the OU15 Phase I RFI/RI, and outlines the procedures that were used to collect the hot water rinsate samples. Two Document Change Notices were issued as modifications to the original SOP, and are included in this appendix.

ENVIRONMENTAL MANAGEMENT DOCUMENT CHANGE NOTICE (DCN)

This is a CONTROLLED DOCUMENT
EG&G ROCKY FLATS PLANT

This is a RED Stamp

Procedure Number 5-21000-OPS-FO.27, Rev. 0
(4-B01-ER-OPS-FO.27)

Title	Date	DCN Number
Collection of Floor/Equipment Hot Water Rinsate Samples	8-30-93	93.02 dw

Expires 8-30-94 Procedure Revision Required ☒ Yes ☐ No

Scope Limitation OU 15

Item Number	Page	Step or Paragraph	Changes (Use DCN CONTINUATION SHEET for Additional Space)
1	9	6.1.2.4 First Par. First Sentence	remove "(modified Level D, Anti - C, etc.)" from the sentence
2	13	6.3 First Par. 2nd Sentence	replace sentence with: "Field personnel will collect one (1) fresh water source sample per fresh water source, using the same preservatives and types of containers required for the floor/equipment surface samples."

DOCUMENT CLASSIFICATION REVIEW WAIVER
PER R.B. HOFFMAN, CLASSIFICATION OFFICE
JUNE 11, 1991

Justification (Reason for Change – Provide Numbers To Reference Corresponding Items Above)

1 The site specific Health and Safety Plan (HASP) for OU 15 will be followed for Personnel Protective Equipment. This reference to PPE is unnecessary and has resulted in conflicts with the HASP for OU 15.

2 The previous statement was not clear which could result in multiple samples being obtained unnecessarily.

APPENDIX A HOT WATER RINSATE SAMPLING LOG SHEET 19

1. PURPOSE

This Standard Operating Procedure (SOP) describes procedures that will be used for the collection of hot water rinsate samples from the Floor/Equipment Hot Water Rinsate Sample Collection System developed for the Operable Unit 15 (OU 15) Phase I RCRA Facility Investigation/Remedial Investigation (RFI/RI), as described in the Final Phase I RFI/RI Work Plan for Operable Unit 15 Inside Building Closure.

2. SCOPE

This SOP describes personnel responsibilities and qualifications, sample collection and preservation procedures, quality assurance/quality control (QA/QC), and documentation requirements that will be used for field data collection activities in order to attain acceptable standards of accuracy, comparability, representativeness, and completeness.

3. REFERENCES

3.1 Primary References

The following is a list of references reviewed prior to the writing of this procedure:

3.2 Secondary References

Related EG&G SOPs cross-referenced by this SOP are as follows:

- SOP FO.3, General Equipment Decontamination
- SOP FO.7, Handling of Decontamination Water and Wash Water
- SOP FO.13, Containerization, Preserving, Handling, and Shipping of Soil and Water Samples
- SOP FO.14, Field Data Management
- SOP SW.2, Field Measurement of Surface Water Field Parameters

The following documents are also referenced by this SOP:

Final Phase I RFI/RI Work Plan for Operable Unit 15 Inside Building Closure;

Site-Specific Health and Safety Plan, Implementation of Phase I RFI/RI Work Plan for Rocky Flats Plant Operable Unit 15;

EG&G Health and Safety Practices; and

Rocky Flats Plant Environmental Restoration Health and Safety Program Plan.

4. LIMITATIONS AND PRECAUTIONS

None

5. PREREQUISITES

All personnel performing these procedures are required to have appropriate health and safety training as specified in the Site-Specific Health and Safety Plan, Implementation of Phase I RFI/RI Work Plan for Rocky Flats Plant Operable Unit 15, the EG&G Health and Safety Practices manual and the Rocky Flats Plant Environmental Restoration Health and Safety Program Plan. In addition, all personnel will read and understand the procedures described within this SOP and receive specific training regarding these procedures.

Personnel performing hot water rinsate sample collection activities will be engineers, scientists, or field technicians who have completed the required training. Project training requirements are listed in the OU 15 Site-Specific Health and Safety Plan. All field personnel will also complete training on the procedures described in this SOP and those incorporated by reference.

6. INSTRUCTIONS

6.1 Sampling Method

The overall objective of this sampling SOP is to meet the performance requirements pursuant to the OU 15 Work Plan. The OU 15 Work Plan includes the environmental investigation and assessment of six rooms within Buildings 447, 865, 881, and 883. The assessment portion of the OU 15 Work Plan includes: 1) qualitative and quantitative analysis of floor and equipment surface contamination; 2) analysis of potential migration pathways; and 3) evaluation of health and safety risks within the rooms.

6.1.1 Hot Water Rinsate Sample Collection System

The hot water rinsate sample collection system designed for use during the OU 15 field investigations consists of a series of modular components, which are divided into two major groups. The first equipment group is comprised of a spray applicator and vacuum head, an interceptor can/receiver, and associated connecting hoses and fittings. A set of

this equipment will be dedicated to each of the Individual Hazardous Substance Sites (IHSSs) to be sampled using this system. The second equipment group consists of a hot water reservoir and heater, a High Efficiency Particulate Air (HEPA) vacuum unit, an activated carbon adsorption unit, and associated connecting hoses and fittings. This equipment will be reused for all of the IHSSs to be sampled, since the equipment will be remotely positioned. The hot water rinsate sample collection system, which is depicted in Figure 1, has the following characteristics and capabilities:

- The hot water rinsate sample collection system is equipped with an independent ground fault circuit interruption (GFCI) device, which is mounted on the system's four-wheel drum cart. The GFCI device will be plugged into the building's 120 VAC electrical circuit via a three wire (grounded) plug to supply power to the system.

- The hot water source is a self-contained system component with a capacity of approximately 12 gallons. The hot water reservoir is equipped with an electric heater that heats and maintains the water temperature within the range of 140°F to 160°F. The hot water reservoir is plumbed to the spray applicator and vacuum component with a hose system that is 75 feet in length. The hot water hose connections are "quick-couple" release types.

- The hot water spray applicator delivers hot water (140°F to 160°F) at a pressure of approximately 90 to 100 psi.

- The hot water spray applicator and vacuum head component is equipped with a spray head which delivers the hot water stream directly in the path of the vacuum head collection nozzle. The spray and vacuum ports are mounted together, allowing the rinsate to be collected immediately after application. The vacuum head component is attached to a smooth bore 1-1/2 inch flexible plastic hose (30 feet in length), which in turn is attached to the sample collection interceptor can/receiver.

- The interceptor can/receiver is a bag-lined metal container on a four-wheel caster dolly, and has a liquid capacity of five gallons. Hot water rinsate vacuumed from the floor is transferred to the interceptor can/receiver, where samples can then be collected. Air exhausted from the interceptor can/receiver is conveyed by 1-1/2 inch flexible vacuum hose (45 feet in length) to the HEPA vacuum component.

- The HEPA vacuum unit is outfitted with a HEPA filter cartridge and provides the vacuum capacity for the entire system. The HEPA vacuum component is located on top of a open-top 55-gallon drum, which provides vapor condensate surge capacity and is situated on the four-wheel two-drum cart. A new HEPA filter cartridge will be used for each IHSS sampled with the system.

- The second position on the four-wheel drum cart will be occupied by the activated carbon adsorption component. Exhausted air from the HEPA component will be vented to the activated carbon adsorption component.

- The activated carbon adsorption unit consists of a 55-gallon canister filled with activated carbon. The carbon canister, which weighs approximately 325 pounds, is an air scrubbing, vapor phase carbon adsorption unit, which has low pressure drop characteristics (0.5 inches of water) and is of a radial diffusion design.

6.1.2 Sampling Procedure

This SOP specifically addresses the following OU 15 sampling activities:

- sampling source water;
- sampling floor surfaces;
- sampling laboratory equipment surfaces; and
- sampling areas surrounding specific equipment outlined in the OU 15 Work Plan.

6.1.2.1 Sample Location

Floor or equipment surface rinsate samples will be collected from each of the six areas to be evaluated, as per the OU 15 Work Plan. Floor areas, as well as areas around specific equipment components, will be systematically sampled by the collection of a hot water rinsate samples. Field duplicate samples, equipment blanks, and field blank samples will be collected from each of the areas to be sampled, as described in Section 6.3.

The location from which rinsate samples will be taken are defined and specified in the OU 15 Work Plan. The sample location will be entered into the field log and on the sample custody sheet at the time of rinsate collection.

6.1.2.2 Constituents to be Analyzed

Floor and equipment surface rinsate samples will be analyzed for the constituents listed in the OU 15 Work Plan for the respective IHSSs.

6.1.2.3 Sample Designation

Surface samples collected from floor areas and designated equipment will be assigned a sequential number based on the order in which they are collected. Each location will be marked on a facility diagram, measured relative to site structures, and described in a designated field book. A block of sample numbers will be assigned by Environmental Restoration Sample Management in order to maintain consistency with the Rocky Flats Environmental Data System (RFEDS) sample numbering system. Typically RFEDS sample numbers consist of a two digit sample prefix which indicates the sample type, a five digit serial number which identifies the sample, and a suffix which identifies the contractor collecting the sample.

6.1.2.4 Personal Protective Equipment

Personnel performing the rinsate sample collection will be properly attired with the personnel protective equipment (modified Level D, Anti-C, etc.) systems specified in the OU 15 Site-Specific Health and Safety Plan. When rinsate sample collection is performed in radiologically controlled areas, an EG&G Radiation Protection Technologist will assess each entry and exit from the OU 15 Work Plan sample collection areas.

6.1.2.5 Sample Collection

Collection of representative rinsate samples after pressurized application requires that a reliable SOP be written and implemented. The procedures described in this section will be utilized to collect samples from the rinsate collection interceptor container. For the protection of sample integrity, latex gloves must be worn by the samplers at all times during the sample collection process. To avoid contaminating the sample, the inside of the cap and sample bottle must not be touched nor allowed to touch interceptor container, floor or equipment surfaces, and other materials.

Sample containers will be precleaned or purchased precleaned before use. All containers, preservatives, preparation requirements and holding times will conform to EPA requirements as listed in Table 2. Additional information on these requirements may be found in EG&G SOP FO.13.

Sampling at each location will be specific to the needs and requirements for that area as determined by the OU 15 Work Plan. The full set of parameters listed in Table 1 may be modified according to changes in the OU 15 Work Plan and as authorized by Project Management. A step by step description of the sampling procedure is provided in the following subsections.

6.1.2.5.1 Prior to each sampling event, weigh the empty rinsate collection system liner bag and twist-tie. This weight determination will be used to calculate the mass of rinsate collected during each sample collection activity. Log the empty liner bag weight on the sample collection form (included as Appendix A) and in the field log book.

6.1.2.5.2 Shut-off power to the vacuum system by flipping the on/off switch to the off position and wait five seconds to allow the pressure within the rinsate collection system to return to atmospheric. Then remove the top of the interceptor container. With the top of the interceptor removed, the sample collection bag (liner) will be exposed. Remove the liner bag with the rinsate contents. Twist the top of the bag liner until it is sufficiently closed to seal the rinsate contents from the ambient room atmosphere and secure it with a twist-tie.

6.1.2.5.3 Weigh the rinsate sample bag liner with the collected liquid and enter weight on sample log sheet. Subtract the empty weight of the bag liner from the combined weight to determine the weight of the collected liquid rinsate sample and log in sample log sheet. The weight of the rinsate sample can then be used to determine an approximate volume of liquid collected.

6.1.2.5.4 Sample collection will require two people to perform the task. The volatile organic compound (VOC) and semi-VOC samples will be collected first. The rinsate sample bag liner is equipped with a valve assembly that will allow for liquid sample transfer to the appropriate sample collection container, as specified in EG&G SOP FO.13.

One person will hold the rinsate sample collection bag liner and operate the valve assembly. The second person will manipulate the sample containers for the purpose of sample collection by removing the cap of the specified container and placing the container under the valve assembly.

Open the valve assembly and allow the liquid to fill the sample container. Hold the bottle in one hand and the cap in the other, right side up (threads down), while collecting the sample. Close the valve when the sample container is full. If the cap liner or septum has a tendency to fall out of the cap, the cap and liner/septum should be placed on a sheet of plastic with the thread side down. If the inside of the sample container or lid are touched or otherwise contaminated, they must be replaced. After

collecting the sample, preserve and prepare the sample, replace the cap, apply a tamper-proof seal, place the bottle in a plastic bag, and store in a cooler at 4°C using blue ice sealed in plastic bags.

6.1.2.5.5 Place the sample beaker underneath the valve assembly, and open it to allow the liquid to fill the beaker. Close the valve when the beaker is full. Measure the pH, temperature, and conductivity (specific conductance) of the water in accordance with EG&G SOP SW.2. Record these values, as well as the time the sample was taken on the rinsate collection sample log sheet.

6.1.2.5.6 Collect the remaining samples in the order specified in Table 1 using the same procedure described in Section 6.1.2.5.4.

6.1.2.5.7 Record any unusual observations about the liquid during sampling procedures, such as color or odor; record the time the sampling period occurred and the time sampling was concluded.

6.1.2.5.8 Complete all chain of custody forms and documentation at the time the samples are collected in accordance with the requirements of EG&G SOP FO.13 and the OU 15 Work Plan.

6.1.3 Management of OU 15 Waste and Residuals

Waste and residuals generated as part of the hot water rinsate sampling process will be packaged and managed according to the procedures established by the individual buildings where the sampling activities are being conducted. The wastes and residuals generated from the hot water rinsate sampling activities are expected to include used personal protective equipment, excess hot water rinsate, used rinsate collection liner bags and potentially contaminated sampling equipment. The solid form wastes will be managed in accordance with direction from EG&G Waste Technical Support. The storage and/or disposal options for these wastes are based on whether the wastes are radioactively contaminated and whether they are saturated with rinse water. In accordance with direction from EG&G Waste Technical Support, the liquid form wastes

will initially be stored in 55-gallon bung drums labelled "characterization pending upon results of analysis." These liquid wastes will be managed based on the analytical results from the rinsate samples, once they are received.

Excess rinsate liquid will be transferred from the collection liner bags to a 55-gallon bung drum in a manner similar to the sample collection procedure described in Section 6.1.2.5.4. One person will hold the rinsate sample collection bag liner and operate the valve assembly. The second person will manipulate the position of the bag and align it with the bung opening on the drum. A funnel will be used to direct the liquid flow into the drum. Once the valve assembly and bung opening are properly aligned, the valve assembly should be opened to allow the liquid to flow into the drum.

6.2 Decontamination

Equipment, including field instrumentation and non-dedicated hoses, will be decontaminated after each area/room sampling effort. Decontamination procedures are presented in Sections 5.5 and 5.6 of EG&G SOP FO.3.

6.3 Quality Assurance/Quality Control

QC samples for the floor/equipment hot water rinsate sampling fall into four categories:

- Hot Water Source (prior to being used for rinsate generation)
- Sample Duplicate
- Equipment Blank
- Trip Blank

EG&G SOP FO.13 describes the general handling of samples. The OU 15 Work Plan specifies sample frequencies. Sample collection procedures will be the same as those described in Section 6.1 of this SOP for source water, equipment blank and duplicate samples.

Hot water source samples will be collected by field personnel to measure the quality of the water used to generate the hot water rinsate. Field personnel will collect these samples directly from the fresh water source each time the hot water rinsate system is filled with fresh water, using the same preservatives and types of containers required for the floor/equipment surface samples.

Duplicate samples will be used as a relative measure of the precision of the sample collection process. Field personnel will collect these samples at the same time, using the same procedures, equipment, preservatives and types of containers required for the floor/equipment surface samples.

Field personnel will collect equipment blanks from final decontamination rinsate to evaluate the success of their decontamination efforts on non-dedicated sampling equipment. Field personnel will obtain these samples by rinsing cleaned equipment with distilled water prior to sample collection, and placing the rinsate in the appropriate sample containers using the same preservatives required for the floor/equipment surface samples.

Trip blanks consisting of deionized water will be prepared by a laboratory technician and will accompany each shipment of water samples sent for volatile organic analysis. Field personnel will package and store these samples with the group of samples with which they are associated. Analysis of the trip blanks will serve to identify the migration of volatile organics or other problems associated with shipment, handling or storage of samples.

7. DISPOSITION

A permanent record of the implementation of this SOP will be kept by documenting field (room/area) observations and data on the source of hot water, volume of hot water used, volume of rinsate sample collected, and parameters for which the sample was collected. All information will be entered on the hot water rinsate sampling log sheet. Observations and data will be recorded with black waterproof ink. Field logbooks and daily log sheets for sampling will be utilized to summarize the daily field (room/area) activities and to document project information not required by field forms. Initials of the individual entering the information onto the form(s) shall be written next to each entry as it is made. All field documentation will be transferred to EG&G on a weekly basis during the conduct of the field investigations. Documentation of field personnel training will be maintained as described in the OU 15 Site-Specific Health and Safety Plan.

TABLE 1
SAMPLE PARAMETERS AND ORDER OF FIELD COLLECTION

1. VOC's
2. Semi VOC's
3. Radionuclide Screen
4. Metals (dissolved)
5. Cyanide
6. Radionuclides (dissolved)

TABLE 2
CONTAINERS, PRESERVATIVES, AND HOLDING TIMES

Parameter	Container	Preservative	Holding Time (Days)
TCL VOCs	2 glass 40-ml vials w/Teflon-lined silicon rubber septum	Cool, 4°C[a]; HCL to pH < 2	7 days 14 days
TCL BNA (Semi-VOCs)	Glass-Amber[b]/1 x 1 L	Cool, 4°C	7 days until extraction, 40 days after extraction
Radionuclide Screen	Glass/1 x 125 ml	HNO_3 to pH < 2	180 days
TAL Metals (dissolved)	Polyethylene/1 x 500 ml	Filter[c]; HNO_3 to pH < 2; Cool, 4°C	180 days[d]
Cyanide	Polyethylene/1 x 1 L	NaOH to pH > 12[e]; Cool, 4°C	14 days
Radionuclides (dissolved)	Polyethylene/2 x 1 G	Filter[c]; HNO_3 to pH < 2	180 days

(a) Add 0.008% sodium thiosulfate ($Na_2S_2O_3$) in the presence of residual chlorine.
(b) Container requirement is for any or all of the parameters given.
(c) A 0.45-micron filtering apparatus will be used.
(d) Holding time for mercury is 28 days.
(e) Use ascorbic acid only if the sample contains residual chlorine. Test a drip of sample with potassium iodine-starch test paper; blue color indicates need for treatment. Add ascorbic acid, a few crystals at a time, until a drop of sample produces no color on the indicator paper, then add an additional 0.6 g of ascorbic acid for each liter of sample volume.

TABLE 3
HOT WATER RINSATE FIELD QC SAMPLE FREQUENCY

Sample Type	Type of Analysis	Frequency
Duplicates[1]	Organics Radionuclides Inorganics	1/10 1/10 1/10
Field Preservation Blanks	Organics Radionuclides Inorganics	NA NR NR
Equipment Rinsate Blanks[2]	Organics Radionuclides Inorganics	1/20 1/20 1/20
Trip Blanks	Organics Radionuclides Inorganics	1/20 NR NR

NA = Not Applicable
NR = Not Required
1/10 = one QC sample per ten samples collected

1 Duplicate samples will be collected at a minimum of 1/10 or once per day of sampling, whichever is more frequent.

2 Equipment rinsate blanks will be collected at a minimum of 1/20 or once per day of sampling, whichever is more frequent.

APPENDIX C

Appendix C contains copies of the hot water rinsate sampling log sheets completed during the OU15 Phase I RFI/RI field investigations. The information presented on the log sheets, which includes sample field parameters and observations, was collected in accordance with the requirements of EG&G SOP FO.27 (Collection of Floor/Equipment Hot Water Rinsate Samples). The blank log sheet form is included as Appendix A in EG&G SOP FO.27.

APPENDIX E

Appendix E contains the complete Rocky Flats Environmental Database System (RFEDS) database for the OU15 project. A copy of the "RFEDS Basic Analytical Data Extraction Format Description" (dated 2/14/94) is also included as a complete reference for all RFEDS field names and codes. Although the RFEDS format changes slightly from time to time, the format description contained herein is applicable to the RFEDS printout and to the tables contained in the Final Phase I RFI/RI Report for OU15.

In order to make the RFEDS printout more legible, certain fields in RFEDS that were either empty (unused) throughout the OU15 project, or contained the same value in all records were eliminated from the following printout. These fields were:

Project Name	This field contains the project name identifier. The value for this field in all RFEDS records for the OU15 Phase I RFI/RI was "OU15_RFI/RI."
Sample Type	The value contained in this field was the same in all RFEDS records for the OU15 Phase I RFI/RI. The value was "BU."
Run Number	The value contained in this field was the same in all RFEDS records for the OU15 Phase I RFI/RI. The value was "1."
Count Number	The value contained in this field was the same in all RFEDS records for the OU15 Phase I RFI/RI. The value was "1."
Lab QA Code	This field was blank in all RFEDS records for the OU15 Phase I RFI/RI.
Result Qualifier	This field was blank in all RFEDS records for the OU15 Phase I RFI/RI.

RFEDS BASIC ANALYTICAL
DATA EXTRACTION FORMAT DESCRIPTION
2/14/94

The output file from a standard data extraction is ASCII format, column delimited with spaces used to fill out column width. An additional space has been added between columns for legibility.

The requested data extraction has the following column format:
ADDITIONAL SPACE = 1

FIELD	STARTING POSITION	FIELD LENGTH
Location	1	15
Sample Number	17	20
Project Name	38	15
Sample Type	54	2
Sample QC Code	57	4
Sample QC Partner	62	20
Sample Date	83	9
Laboratory	93	5
Lab Batch Id	99	15
Analysis Date	115	9
Test Group Code	125	10
Result Type	136	3
Chemical	140	40
Parameter Code	181	11
Run Number	193	3
Count Number	197	3
Lab QA Code	201	4
Lab Sample Number	206	10
Result Qualifier	217	1
Result	219	10
Unit Measure	230	10
Error	241	10
Qualifier	252	5
Detect Limit	258	10
Validation	269	2
Reason1	272	3
Reason2	276	3
Reason3	280	3
Reason4	284	3
Validation Date	288	9
Sequence Id (RFEDS ID)	298	10
Secondary Result Type	309	3
Matrix	313	8
Lab Disposition	322	15

Attachment 1

BASIC ANALYTICAL
COLUMN NAME AND DESCRIPTION
2/14/94

LOCATION CODE	The actual name of the sampling location.
SAMPLE NUMBER	The sample identifier.
PROJECT NAME	The project name abbreviation.
SAMPLE TYPE	A two letter abbreviation of the type of sample. Refer to description sheet.
SAMPLE QC CODE	Quality control sample information provided by the field. Examples include "REAL" for the primary field sample, "RNS" for a rinse blank, and "DUP" for a duplicate sample. Refer to description sheet.
SAMPLE QC PARTNER	The sample number associated with a QC sample's REAL sample is entered here. If the sample is REAL then this column is left blank. (This field has not been QA'd by RFEDS)
SAMPLE DATE	The date the sample was collected. Date format (DD-MON-YY).
LABORATORY	The identification code of the laboratory that performed the analysis.
LAB BATCH ID	Also referred to as the Sample Delivery Group (SDG). The internal lab identifier that indicates the laboratory grouping of samples in which the sample was analyzed. The SDG can be used for more than one analysis.
ANALYSIS DATE	Date the sample was analyzed at the laboratory. Date format (DD-MON-YY).
TEST GROUP CODE	Also referred to as the method code. This is a RFEDS code for the method used to analyze a group of samples.
RESULT TYPE	RFEDS codes that differentiate between target analytical results, laboratory quality assurance samples, and analytical reanalysis. This field specifically distinguishes the multiple analytical attempts when more than one analysis attempt was necessary. Refer to description sheet.
CHEMICAL	The analyzed compound name.
PARAMETER CODE	The unique number assigned to an analyte by the Chemical Abstract Service. RFEDS specific CAS numbers are used when formal CAS numbers are not available.
RUN NUMBER	This column is for on-site laboratory data. Corresponds to the number of times a sample is run for analysis. Default is 1.
COUNT NUMBER	Default is 1.
LAB QA CODE	Currently on-site laboratory populates this column.
LAB SAMPLE NUMBER	The internal lab identifier used to track a specific sample.
RESULT QUALIFIER	Qualifiers used as indicated by the Environmental Protection Agency/Contract Lab Program (EPA/CLP) Statement of Work (for non-RAD). Common entry is "<" (less than).
RESULT	Concentration numeric value.
UNIT MEASURE	The unit of measure for the result. Refer to description sheet.

ERROR	The counting error. Error data is provided for radionuclide analyses only.
LAB QUALIFIER	Detailed information explaining the result. Refer to description sheet.
DETECT LIMIT	The detection limit specified for the analysis type as required in the GRRASP. For diluted samples, the detection limit is corrected for the dilution factor. For soils the detection limit is corrected for percent moisture. For soils that have been diluted, the values represent a correction for both the dilution factor and percent moisture as specified in GRRASP.
VALIDATION	Validation code. Refer to description sheet.
REASON 1	Reason code on supplemental information about this record from the validation firm. Refer to description sheet.
REASON 2	Reason code on supplemental information about this record from the validation firm. Refer to description sheet.
REASON 3	Reason code on supplemental information about this record from the validation firm. Refer to description sheet.
REASON 4	Reason code on supplemental information about this record from the validation firm. Refer to description sheet.
VALIDATION DATE	The date this validated record was loaded into the database. Date format (DD-MON-YY).
SEQUENCE ID (RFEDS ID)	A database object used to generate unique integers for use as primary key. Each analytical row (record) has a unique sequence id.
SECONDARY RESULT TYPE	Designation of Tentatively Identified Compound (TIC) or SURROGATE (SUR) as a special result type. Effective November 1, 1993.
MATRIX	The predominant material comprising the sample. Examples include LIQUID OR SOLID. (Reported by the laboratory). Refer to description sheet.
LAB DISPOSITION	If results could not be transmitted then the reason disposition code is written here. Refer to description sheet.

SAMPLE TYPE DESCRIPTIONS 12/17/93

ST	DESCRIPTION
AM	AIR MONITORING
AS	ASPHALT SAMPLING
BH	BOREHOLE
BI	BIOLOGICAL
BP	BOREHOLE/NOT-NATIVE PACKING MATL,WELL ABANDONMENT
BU	BUILDING

Y	ANALYTICAL RESULTS IN VALIDATION PROCESS
Z	VALIDATION WAS NOT REQUESTED OR PERFORMED

VALIDATION REASON CODE DESCRIPTIONS 12/17/93

VAL	DESCRIPTION
1	Holding times were exceeded
2	Holding times were grossly exceeded
3	Initial calibration correlation coefficient <0.995
4	Calibration verification criteria were not met
5	CRDL check sample recovery criteria were not met
6	Incorrect calibration of instrument
7	Analyte values > IDL were found in the blanks
8	Negative bias was indicated in the blanks
9	Interference indicat in the ICP Interf Chk Smpl
10	Lab Control Sample recovery criteria were not met
11	Duplicate sample precision criteria were not met
12	Predigestion matrix spk crit werent met (+/- 25%)
13	Predigestion matrix spk crit werent met (<30%)
14	Postdigestion matrix spk recov crit were not met
15	MSA was required but not performed
16	MSA calibration correlation coefficient <0.995
17	Serial dilution criteria not met
18	Documentation was not provided
19	Calibration verification crit not met
20	AA dup injection precision crit were not met
21	Reagent blanks exceeded MDA
22	Tracer contamination
23	Improper aliquot size
24	Sample aliquot not taken quantitatively
25	Primary standard had exceeded exp date
26	No raw data submitted by the laboratory
27	Recovery criteria were not met
28	Duplicate analysis was not performed
29	Verification criteria were not met
30	Replicate precision criteria were not met
31	Replicate analysisi was not performed
32	Lab control samples > +/- 3 sigma
33	Lab cntrl smpls > +/- 2 sigma and < +/- 3 sigma
34	Efficiency spectra shows drop
35	tSIE criteria were not met
36	MDA exceeded the RDL
37	Sample exceeded efficiency curve weight limit
38	Excessive solids on planchet
39	Tune criteria not met
40	Organics initial calibration crit werent met
41	Organics cont. calibration crit werent met
42	Surrogates were outside criteria
43	Internal standards outside criteria
44	No mass spectra were provided

VAL	DESCRIPTION
46	GC/MS confirmation was not performed
47	Percent breakdown exceeded 20 percent
48	Linear range of instrument was exceeded
49	Method blank contamination
50	Unknown carrier volume
51	Nonverifiable lab results and/or unsubmitted data
52	Transcription error
53	Calculation error
54	Incorrect reported activity or MDA
55	Result excds linear range, serial dilut val rptd
56	IDL changed due to significant figure discrep.
57	Percent solids < 30 percent
58	Percent solids < 10 percent
59	Blank activity exceeded RDL
60	Blank recovery criteria were not met
61	Replicate recovery criteria were not met
62	LCS relative percent error criteria not met
63	LCS expected value not submitted/verifiable
64	Non-traceable/non-certified standard was used
65	Tracer/spike aliquot non-verifiable
66	Carrier aliguot non-verifiable
67	Sample results not submitted/verifiable
68	Frequency of quality control samples not met
69	Samples not distilled
70	Resolution criteria not met
71	Unit conversion of results
72	Calibration counting statistics not met
73	IPA not performed
74	LCS data not submitted
75	Blank data not submitted
76	Instrument gain and/or efficiency not submitted
77	Detector efficiency criteria not met
78	MDAs were calculated by reviewer
79	Result obtained through dilution
80	Spurious counts of unkown origin
81	Repeat count outside of 3 sigma counting error
82	Sample results were not corrected for decay
83	Sample rslts werent included on Data Sum. Table
84	Key fields wrong
85	Record added by QLI
86	Results consid. qualitative not_quantitative
87	lab did no analysis for this record
88	blank corrected results
89	sample analysis was not requested
90	sample result was validated due to re-analysis
91	unit conversion.qc sample activity/uncertainty/MDA

[illegible] for further explanation.

MATRIX DESCRIPTIONS 12/17/93

MATRIX	DESCRIPTION
AIR	SAMPLES OF CONFINED AIR
BIOTA	OBSOLETE; HOW RAD LABS ARE REPORING FAUNA
CHARCOAL	CHARCOAL FILTER MATERIAL
FAUNA	ALL ANIMAL TISSUES, BODIES OR COMPOSITES, INCLUDING MAMMALS, INSECTS,REPTILES AND AMPHIBIANS
FILTER	ANY SAMPLE COMPOSED OF ANY TYPE OF FILTER
FILTSOX	OBSOLETE; HOW LABS USED TO REPORT FILTER
FISH	ALL AQUATIC VERTEBRATE SAMPLES
FLORA	PLANT SAMPLES
GLASS	CRUSHED GLASS
LIQUID	ALL WATER OR LIQUID SAMPLES. ALL TCLP ANALYSIS AND ALL TRITIUM ANALYSIS.
SED	OBSOLETE; HOW LABS USED TO REPORT SEDIMENT
SLUDGE	MIXTURES OR CHEMICAL SLUDGE NETHER SOLID NOR LIQUD
SOIL	OBSOLETE; HOW LABS USED TO REPORT SOIL
SOLID	ALL SOIL, SEDIMENT, ASPHALT OR OTHER SOLID SAMPLES
WATER	OBSOLETE; HOW LABS USED TO REPORT WATER
WIPE	ANY TYPE OF MATERIAL USED FOR WIPES

LAB DISPOSITION DESCRIPTION 2/14/94

DISPOSITION	DESCRIPTION
ANALYSIS FAILED	NO EDD, LAB UNABLE TO OBTAIN REPORTABLE RESULTS
BROKEN BOTTLE	NO SAMPLE TAKEN, BOTTLE WAS BROKEN
CANCELED	NO EDD, RECEIVED BY LAB THEN CANCELED BY FIELD
CHANGE REQUEST	LAB REQUESTED TO PERFORM ANALYSIS NOT ON COC
DAMAGED BY LAB	NO EDD, SAMPLE RECEIVE BY LAB THEN DAMAGED
DET LIM = A	LAB REPORTED A AS THE DETECT LIMIT
DET LIM = R	LAB REPORTED R AS THE DETECT LIMIT
DRY	NO SAMPLE TAKEN, WELL WAS DRY
EQUIPMENT	NO SAMPLE TAKEN, EQUIPMENT PROBLEMS
ERROR ON COC	NO EDD, ERROR MADE WHILE COMPLETING COC
EXCEED HOLD TM	NO EDD, SAMPLE EXCEEDED HOLDING TIME
EXTRA ANALYTE	LAB REPORTED ANALYTE NOT INCL IN EXPCTD ANAL SUITE
FR	LAB REPORTED FR AS THE RESULT
FROZEN	NO SAMPLE TAKEN, WATER SURFACE IS FROZEN
GRRASP REQ	LAB DATA, GRRASP REQUIRED, NOT A COC REQUEST
HARD COPY ONLY	NO EDD, HARD COPY RESULTS ONLY
INSUF.SMPL	LAB REPORTED INSUF.SMPL AS THE RESULT
IS	LAB REPORTED IS AS THE RESULT
IV	LAB REPORTED IV AS THE RESULT
JUL0	LAB REPORTED JUL0 AS THE RESULT
LAB CHANGED	NO EDD, SAMPLE WAS SHIPPED TO A DIFFERENT LAB
LAB SHUTDOWN	NO EDD, LAB NO LONGER OPERATIONAL
LACK WATER	NO SAMPLE TAKEN, INSUFFICIENT WATER
LOST	LAB REPORTED LOST AS THE RESULT
MISSING RESULT	LAB REPORTED NO RESULT, REASON UNKNOWN
NA	LAB REPORTED NA AS THE RESULT
NA/NP	LAB REPORTED NA/NP AS THE RESULT
ND	LAB REPORTED ND AS THE RESULT
NEG	LAB REPORTED NEG AS THE RESULT
NEVER RECEIVED	NO EDD, LAB NEVER RECEIVED SAMPLE
NEVER SHIPPED	SAMPLE WAS COLLECTED AND NEVER SHIPPED TO THE LAB
NG	LAB REPORTED NG AS THE RESULT
NO DISCHARGE	NO SAMPLE TAKEN, NO DISCHARGE OCCURED
NO FLOW	NO SAMPLE TAKEN, NO WATER FLOW AT LOCATION POINT
NO RECOVERY	NO SAMPLE TAKEN DUE TO NO RECOVERY
NO RESULT	NO EDD, NO LAB RESULT FOR THIS SPECIFIC ANALYTE
NO SAMPLE TAKEN	NO SAMPLE TAKEN; FIELD ERROR
NOLOG	LAB REPORTED NOLOG AS THE RESULT
NONE	LAB REPORTED NONE AS THE RESULT

LAB DISPOSITION DESCRIPTION 2/14/94

DISPOSITION	DESCRIPTION
NOT REQUESTED	LAB PROVIDED DATA THAT WAS NOT REQUESTED
NR	LAB REPORTED NR AS THE RESULT
PARTIAL	INSUFFICIENT WATER FOR FULL SAMPLE SUITE
PREP ONLY	NO EDD, SAMPLE SENT TO THIS LAB FOR PREP ONLY
RECD DAMAGED	NO EDD, RECEIVED BY LAB IN A DAMAGED STATE
RECD, DAMAGED	NO EDD, RECEIVED BY LAB IN A DAMAGED STATE
RECD, LOST	NO EDD, RECEIVED BY LAB AND THEN LOST
RECD, NOT ANAL	NO EDD, RECEIVED BY LAB ANALYSIS WAS NOT PERFORMED
REPEAT SAMPLE	1ST BOTTLE BROKE/FROZEN; REUSED SAMPLE #;
RESTRICT ACCESS	NO SAMPLE TAKEN, SECURITY OR CONSTRUCTION PROBLEM
SAMPLED	SAMPLE WAS COLLECTED
U	LAB REPORTED U AS THE RESULT
V	LAB REPORTED V AS THE RESULT
VEHICLE	NO SAMPLE TAKEN, VEHICLE PROBLEMS
WEATHER	NO SAMPLE TAKEN, INCLEMENT WEATHER
WET	SOIL SAMPLE WAS COLLECTED BELOW THE WATER TABLE
WRONG PRESERVE	NO EDD, NO ANALYSIS FIELD USED WRONG PRESERVATIVE

APPENDIX F

Appendix F contains printouts of the output files for all GENII program runs made as part of the Phase I RFI/RI for OU15. The output file from the GENII program includes copies of the input files; separate copies of the input files are therefore not provided. Each GENII run was made for a different radionuclide. The runs are presented in the following order:

Americium 241 (Am-241)

Plutonium 239/240 (Pu-239/240)

Radium 226 (Ra-226)

Uranium 233/234 (U-233/234)

Uranium 235 (U-235)

Uranium 238 (U-238)

This is a near field (narrowly-focused, single site) scenario.
Release is chronic
Individual dose

THE FOLLOWING EXPOSURE PATHS ARE CONSIDERED:
Ground, external
Inhalation uptake
Inadvertent soil ingestion

THE FOLLOWING TIMES ARE USED:
Intake ends after (yr): 25.0
Dose calculations ends after (yr): 50.0

========== FILENAMES AND TITLES OF FILES/LIBRARIES USED ==========

Input file name: \GENII\180am1.in
GENII Default Parameter Values (28-Mar-90 RAP)
Radionuclide Master Library (11/28/90 RAP)
External Dose Factors for GENII in person Sv/yr per Bq/n (8-May-90 R
Internal Dose Increments, PNL Solubility Choices Rerun 12/3/90 PDR

==========

3 Surface soil input unit: (1-m2, 2-m3, 3-kg)

Release Radio-nuclide	Air pCi/L	Surface Soil pCi/kg	Deep Soil pCi/m3	Ground Water pCi/L	Surface Water pCi/L
		----------Basic Concentrations---------			
AM241	5.6E-01	5.6E+06	0.0E+00	0.0E+00	0.0E+00

========== NEAR-FIELD PARAMETERS ==========

0.0	Inventory disposed n years prior to beginning of intake period
0	LOIC occurred n years prior to beginning of intake period
0.0E+00	Fraction of roots in upper soil (top 15 cm)
0.0E+00	Fraction of roots in deep soil
0.0E+00	Manual redistribution: deep soil/surface soil dilution factor
100.0	Source area for external dose modification factor (m2)

========== EXTERNAL EXPOSURE ==========

2.0E+03 Hours of exposure to ground contamination

========== INHALATION ==========

2.0E+03 Hours of inhalation exposure per year
Resuspension not considered

                    GENII  Dose Calculation Program
                       (Version 1.485 3-Dec-90)

Case title:   IHSS 180 Pu-240 Analysis

Executed on:  07/10/94 at 02:06:43                                  Page A.  1
-----------------------------------------------------------------------------

          This is a near field (narrowly-focused, single site) scenario.
          Release is chronic
          Individual dose

          THE FOLLOWING EXPOSURE PATHS ARE CONSIDERED:
               Ground, external
               Inhalation uptake
               Inadvertent soil ingestion

          THE FOLLOWING TIMES ARE USED:
               Intake ends after (yr):                25.0
               Dose calculations ends after (yr):     50.0

========== NEAR-FIELD PARAMETERS ==========

0.0	Inventory disposed n years prior to beginning of intake period
0	LOIC occurred n-years prior to beginning of intake period
0.0E+00	Fraction of roots in upper soil (top 15 cm)
0.0E+00	Fraction of roots in deep soil
0.0E+00	Manual redistribution: deep soil/surface soil dilution factor
100.0	Source area for external dose modification factor (m2)

========== EXTERNAL EXPOSURE ==========

2.0E+03 Hours of exposure to ground contamination

========== INHALATION ==========

2.0E+03 Hours of inhalation exposure per year
Resuspension not considered

Executed on:  07/10/94 at 02:07:22                                Page A.  1
-----------------------------------------------------------------------------

          This is a near field (narrowly-focused, single site) scenario.
          Release is chronic
          Individual dose

          THE FOLLOWING EXPOSURE PATHS ARE CONSIDERED:
               Ground, external
               Inhalation uptake
               Inadvertent soil ingestion

          THE FOLLOWING TIMES ARE USED:
               Intake ends after (yr):                25.0
               Dose calculations ends after (yr):     50.0
