Purpose of Contact: 900-2 IHSS 153 Oil Burn Pit remaining excavation backfill

Discussion

An additional two feet of soil was removed from the floor of the main area of the eastern extension of the Oil Burn Pit. The bottom of the excavation is now within dark grey claystone bedrock. The onsite VOC sample results and the PCB screening results are well below WRW action levels. Offsite sample results have not been received but are anticipated to be below action levels. Backfill of these final areas will proceed. HRC-X will be added with the backfill.
