OTS NOTE

DATE: January 15, 1991
TO: Alexander Williams
FROM: Dan Stout *DS*
SUBJECT: Gruen Watch Company Consideration Recommendation

Attached for your review is a consideration recommendation for the Gruen Watch Co. in Norwood, Ohio. The company was identified by an NLO radiological survey report.

Gruen appears to have participated in brief test operations using their 60 ton mechanical press to shave and stamp washers. Small quantities of uranium appear to be involved, and the 1956 radiological surveys do not indicate significant dispersion of uranium during stamping operations. Because of the scarcity of records, limited period of operation for NLO, and absence of evidence of contamination, I recommend the site be eliminated from FUSRAP.

Please call me if you have any questions.
