Verlette Gatlin, MA-232

I am attaching for entry into the Public Document Room, one copy of the subject documentation. These documents are the backup data for the certification that the facilities are radiologically acceptable for unrestricted use as noted in the certification statement published in the Federal Register. Inasmuch as the certification for unrestricted use is being published in the Federal Register, it is prudent that the attached documentation also be available to the public. These documents should be retained in accordance with DOE Order 1324.2--disposal schedule 25.
