Attached are the files relating to the elimination of the Lockport site from FUSRAP, which should respond to EPA Region II requests. As I indicated, the site is contaminated (primarily surface contamination) but was eliminated from the program because the Department has no authority under the AEA to conduct any remedial action at the site. The owner, State, and EPA were notified of the findings via the letter dated December 20, 1984. Correspondence received and generated following the notification is also attached along with a copy of the site summary.

The final authority review (without the references) is provided for your information. This document is generated to support the DOE decision-making process and is not generally distributed outside of the Department unless there is a specific need. Therefore, please notify DFSD prior to any additional distribution of the authority review.
