NOTICE OF PUBLIC AVAILABILITY

THE UNITED STATES DEPARTMENT OF ENERGY ANNOUNCES THE AVAILABILITY OF THE ADMINISTRATIVE RECORD FOR THE GROUNDWATER OPERABLE UNIT AT THE WELDON SPRING SITE

The U.S. Department of Energy (DOE) announces the availability of the Administrative Record files for the Groundwater Operable Unit at the Weldon Spring Site, Weldon Spring, Missouri. The remedial investigation of contaminated groundwater at the site commenced in May, 1995, and a Record of Decision, documenting the selected remedial action is expected to be finalized in December, 1997.

DOE seeks to inform the public of the availability of the Administrative Record files and encourages the public to comment on documents as they are placed in the Administrative Record.

Currently, documents available for public review include the Remedial Investigation Sampling Plan, Environmental Monitoring Plan, Remedial Investigation/Feasibility Study Work Plan and the Community Relations Plan. Other documents will be needed to the record filed as site work progresses.

These additional documents may include, but are not limited to, the Remedial Investigation/Feasibility Study Report, other technical reports and additional validated sampling data. Comments and new data submitted by interested persons, as well as DOE responses to significant comments will also be included in the Administrative Record. When finalized, the Administrative Record will include all documents which form the basis for selection of a remedial action for contaminated groundwater at this site.

The Administrative Record files are available for review during normal business hours, 8:00 a.m. to 4:30 p.m., at the Weldon Spring Site Remedial Action Project, 7295 Highway 94 South, St. Charles, Missouri 314-441-8086.

Written comments on the Administrative Record should be sent to:
