Mr. Jerry S. Van Fossen, PE
Deputy Project Manager
7295 Highway 94 South
St. Charles, Missouri 63303

Ref: **S.E. DRAINAGE REMEDIATION**

Dear Mr. Van Fossen;

Thank you for arranging the visit to the SE Drainage Area, Monday April 15, 1996. I realize that the remediation plans; specifically, the haul route layout has not yet been finalized. Nevertheless, it appears likely that the haul road will cross State Highway 94; which, along with several other observations, has generated concerns on my part.

The relatively small volume of contaminated soil to be removed (approximately 200 truck loads) probably does not justify a special "constructed" crossing and the planned use of flagmen should be adequate for physical protection of traffic originating from or going to Francis Howell High School. However, I understand that this activity take place during school hours. Given the relatively short duration of hauling (less than one month) I suggest that you might schedule this at times when school is not in session.

My primary concern is the generation of dust during excavation and hauling of the contaminated soil. I have not seen any information regarding dust suppression and/or monitoring during these activities. However, Mr. Lee Koehnstedt stated that these items would be addressed. Would you please forward a copy of these materials when they are developed.

Thank you,
