DOE-15-90

Mr. Basil G. Constantelos, Director
Waste Management Division
U. S. Environmental Protection Agency
Region V - 5H-12
230 S. Dearborn Street
Chicago, Illinois 60604

Dear Mr. Constantelos:

**TIME-CRITICAL REMOVAL ACTION REPORT FOR THE PLANT 6 CONTAMINATED
PERCHED WATER**

DOE has determined that the elevated uranium concentrations in the perched water underneath Plant 6 represents a substantial threat of release into the environment as defined by CERCLA, Section 104(a)(1).

Therefore, DOE has initiated a time-critical removal action that will effectively reduce the near-term threat. This removal action will contribute to the efficient performance of any long term remedial action with respect to the threatened release concerned.

On September 27, 1989 a Technical Information Exchange (TIE) meeting was held at the FMPC between DOE Site Office, U.S. EPA, Ohio EPA and Westinghouse. U.S. EPA concluded that the Plant 6 Contaminated Perched Water Removal Action was a time-critical removal action and therefore did not require an Engineering Evaluation and Cost Analysis (EE/CA). A Notice of Availability (NOA) was issued this week advising the public that a report has been prepared and is available in the two reading rooms, which are located at the FMPC and the Lane Public Library in Hamilton, Ohio.

A copy of the report is attached for your information.

Sincerely,

James A. Reafsnyder
FMPC Site Manager
