Cincinnati, Ohio 45239-8705

Dear Mr. Tiller:

INTEGRATED DEMONSTRATION TREATABILITY TESTS SAMPLING

In support of the Uranium Soils Integrated Demonstration, approximately 7 cubic yards of uranium contaminated soil will be collected for use in treatability tests. All the soil collected will be utilized in tests. The material will be collected from the area west of the Plant 1 Pad and the area directly north of the Sewage Treatment Plant. Both of these areas are currently the subject of separate ongoing Removal Actions.

It is WEMCO opinion that a Removal Site Evaluation (RSE) should not be required for the collection of the treatability tests samples. Although this activity will not be conducted under the provisions of a Removal Action, all appropriate controls will be applied. The engineering controls and criteria applied to all maintenance activities involving excavation will be applied to the excavation of the samples. The Sampling Plan was sent to OEPA and USEPA for review. Based on a conference call with OEPA and USEPA, verbal concurrence was received. Your approval of this approach is requested. Should you have any questions, your point of contact is K. R. Nuhfer on extension 6677.

Very truly yours,

S. W. Coyle, Manager
Environmental Management
