FEDERAL FACILITIES COMPLIANCE AGREEMENT
CLEAN AIR ACT SECTION - ITEM E

U.S. DEPARTMENT OF ENERGY
FERNALD ENVIRONMENTAL MANAGEMENT PROJECT
FERNALD, OHIO

AIRBORNE EMISSIONS REPORT FOR THE PERIOD 07/01/91 TO 09/30/91
IN RESPONSE TO ITEM E OF THE CLEAN AIR ACT SECTION
FEDERAL FACILITY COMPLIANCE AGREEMENT

Introduction

This report is submitted in response to Item E of the Clean Air Act Section of the Federal Facility Compliance Agreement. Specifically, the EPA has required the following action:

"U.S. DOE shall maintain records of monthly particulate matter emissions and shall provide U.S. EPA with quarterly reports."

The emissions of concern are considered to be particulate uranium. The report includes monthly reports of emissions from monitored stacks, unmonitored stacks, and scrubbers; as well as the quarterly summary report. Air emissions at the FEMP are routinely analyzed for total uranium.

Dust Collectors

There are 47 stack samplers currently operational at the FEMP which handle uranium dust. No dust collector associated with these samplers was operated during the reporting period. Dust collectors G1-856, G2-6042, G5-248, G5-262, G5-284, G5-1029, G9N1-1035, and G55-1016 are equipped with a multiple point continuous isokinetic sampler. All other dust collectors are equipped with a single point particulate sampler. A sampler consists of a pleated paper filter in a cap-shaped holder. Air is drawn through the filter, leaving any particulates on the paper. At regular intervals, the filters are destructively analyzed for uranium.

Scrubbers

Conventional monitors cannot be used to measure emissions from wet scrubber systems, because of the high moisture content of the exhaust gas. In the case of a filter sampler, the paper quickly becomes saturated and restricts air flow. To date, a real-time monitor has not been found that can be used in the scrubber exhausts. Particulate emissions reports will include estimated uranium losses from the FEMP scrubber systems. These estimates are based on emissions factors obtained from earlier U.S. EPA Method V stack testing.

There are 13 uranium emissions scrubbers currently operational at the FEMP. Scrubbers were not operated during the reporting period.

Other Emissions

Emissions from eight sources, which do not have samplers installed, are calculated monthly. Emissions factors for these sources are based on hours of operation in the mode which results in an air emission, U.S. EPA Method V stack testing or engineering estimates. There were emissions from three of these sources during the reporting period.

Building vents and unmonitored laboratory hoods are not included in particulate emission reports because uranium losses from these are considered to be insignificant and are reported in the annual NESHAP Subpart H compliance demonstration.

SUMMARY OF URANIUM EMISSIONS FROM PARTICULATE STACKS AND SCRUBBERS
FOR THE PERIOD 7/1/91 to 9/30/91

Emission Point Number	Control Equip.	Stack Sampler Status	U Emissions (kg) Stack Total	% of FMPC Total

TOTAL - Kg U/month			0.031983	0.003804

* Hours as used in emission factor represent hours of operation in the mode which results in an air emission.

** Factors for Plant 6 Scrap Pickle and Briquetting were determined before these facilities were tied into the NOx Destructor. As a result, U emissions will be lower than reported. New emission factors will be developed when stack sampling is complete.

*** Due to the length of time required to analyze air activities, the reported values represent emissions from the previous month.

	NAR	Based on U concentration	0.000000	0.000000
	Decontamination and Decommissioning	1.1E-4 Kg U/batch	0.019360	0.000330
TOTAL - Kg U/month			0.037524	0.005541

* Hours as used in emission factor represent hours of operation in the mode which results in an air emission.

** Factors for Plant 6 Scrap Pickle and Briquetting were determined before these facilities were tied into the NOx Destructor. As a result, U emissions will be lower than reported. New emission factors will be developed when stack sampling is complete.

*** Due to the length of time required to analyze air activities, the reported values represent emissions from the previous month.

Pilot Plt	Reactor area - Hydrogen safety system exhaust vent ***	1.61E+7 (Kg U/hr)*(cc/micro Ci)	0.000000	0.000000
Pilot Plt	Reactor area - Scrubber C (Vessel 1 & 2 offgas line)	6.62E-9 Kg U/hr	0.000000	0.000000
Pilot	Annex area - Stokes vacuum pump	1.73E-8 Kg U/hr	0.000000	0.000000
	NAR	Based on U concentration	0.000000	0.000000
	Decontamination and Decommissioning	1.1E-4 Kg U/batch	0.019800	0.000440
TOTAL - Kg U/month			0.039535	0.002011

- * Hours as used in emission factor represent hours of operation in the mode which results in an air emission.
- ** Factors for Plant 6 Scrap Pickle and Briquetting were determined before these facilities were tied into the NOx Destructor. As a result, U emissions will be lower than reported. New emission factors will be developed when stack sampling is complete.
- *** Due to the length of time required to analyze air activities, the reported values represent emissions from the previous month.
