PUBLIC WATER SUPPLY - DELINEATION OF REQUIRED SERVICE AREA

Dear Mr. Van Hart:

The purpose of this letter is to transmit to Hamilton County a map delineating the area requiring water service as requested by Mr. Keely, of your staff, in a meeting on January 8, 1992. As discussed previously, the Department of Energy (DOE) will support funding a water supply to those residents whose water supply has been affected by the South Groundwater Contamination Plume.

The enclosed map designates a suggested water main distribution network that outlines a proposed water supply to the currently affected properties and those which could reasonably be expected in the foreseeable future. This information is somewhat different than that requested by Mr. Keely in the January 8, 1992 meeting. Mr. Keely requested that the DOE demarcate the specific properties that should be served by the proposed public water supply. DOE has instead delineated a proposed network of water mains along major roads within the area requiring service. The distribution network shown will allow access to the new water supply by any and all residents whose water supply has been or potentially may be affected by the South Groundwater Contamination Plume. This approach allows equal access to all adjacent properties who are interested in tapping in to this phase of the water supply system.

The information presented will allow Hamilton County and the selected water supplier to proceed with preliminary engineering efforts.

If you have any questions or concerns regarding the information presented in this letter or other issues surrounding the provision of public water to the area, please contact Carlos J. Fermainnt, of my staff, at (513) 738-6157.

Sincerely,

R. E. Tiller
