Monitor Well 3032 will be installed and sampled to determine the vertical extent of contamination at location 032. Monitor Well 4032 will be installed and sampled contingent upon the results of sampling Well 3032. The Well(s) will be sampled twice with a two month period between sampling events. The installation and sampling protocols for these wells will be consistent with those outlined in Revision 3 of the RI/FS Work Plan. The long-term sampling frequency for these wells will be detected by the FMPC groundwater monitoring program requirements.
