Major Project, Completion of Safe Shutdown, Finished at Fernald

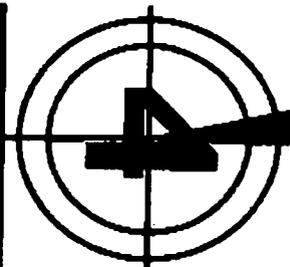

CINCINNATI, March 18, 1999 -- The Department of Energy and Fluor Daniel Fernald have taken one giant step closer to achieving its mission at the Fernald site by completing one of the site's highest priority programs -- "Safe Shutdown."

Employees at the site have spent the past several years shutting down the former production buildings by removing hazardous material, disconnecting all the utilities, eliminating salvageable equipment, and decontaminating the buildings so they can be safely demolished within the next few years.

For the next 3 days, you will receive a fact sheet highlighting each of the site's major facilities that have been safely shut down (see attachment). To learn more about the significance of completing Fernald's Safe Shutdown program, members of the press should plan to attend a site tour and recognition ceremony on Monday, March 22, at 11:30 a.m., at the site. The Secretary of Energy, Bill Richardson, will serve as the keynote speaker and share his views on the importance of completing this project.

If you plan to attend the ceremony, please arrive at least 15 minutes early for shuttle service to Plant 6, the former Metals Fabrication Plant, where the event will take place. Media will be permitted to take photos and video of the plant and will also be provided with background footage.

See Attachment

Plant 4, Green Salt Plant

Function:

Green salt, a key intermediate compound in the overall uranium production process, was produced in Plant 4.

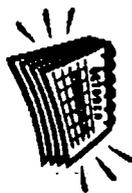

Material removed:

Employees removed more than 25,000 pounds of hazardous material from the 200,000 square foot building.

Safe Shutdown:

Began in October 1994 and ended in October 1995.

Demolition date:

1996

Interesting fact:

Plant 4 was the first of Fernald's buildings to require substantial Safe Shutdown work.
