

VARIANCE / FIELD CHANGE NOTICE

V/F No. 11

4451

WBS NO.: 2505-WP-0022

Page 1 of 1

PROJECT TITLE: Integrated Environmental Monitoring Plan, Rev. 2.

Date: 8/14/02

VARIANCE / FIELD CHANGE NOTICE (Include justification):

Requirement: As per the Appendix D of the IEMP, turbidity monitoring at the confluence of the northern drainage ditch and Paddy's Run following rains exceeding 0.5 inches, is conducted to ensure FEMP operations do not have the potential to adversely affect the Paddys Run Sloan's crayfish population.

Variance: Visual turbidity monitoring is no longer required until remediation activities in the immediate vicinity have the potential to adversely impact turbidity in the northern drainage ditch.

Justification: OEPA gave verbal approval to suspend these observations until remediation activities in the immediate vicinity have the potential to adversely impact turbidity in the northern drainage ditch. Surveys of the Sloan's crayfish population will still take place as identified in the IEMP to verify that there is no adverse impact to the population itself.
