SUBJECT: 2013 Hazardous Chemical Inventory Forms and Maps – United States Department
of Energy Fernald Preserve

The intent of this letter is to communicate to you that the Fernald Preserve did not have to complete the Calendar Year 2013 Hazardous Chemical Inventory Tier 2 Report as required under Section 312 of the Emergency Planning and Community Right to Know Act (EPCRA) of 1986 and Ohio Administrative Code (OAC) 3750-30.

The Fernald Closure Project (recently renamed the Fernald Preserve) is now the responsibility of the United States Department of Energy Office of Legacy Management and managed by the S. M. Stoller Corporation. There were no chemicals above the threshold planning quantities on site in CY2013; therefore, no Tier 2 Report was required. While evaluations of chemical usage and storage will be ongoing and appropriate reporting will be made, it is expected that the storage of chemicals above threshold quantities will not occur based on anticipated activities at the site.

Please contact Mary Sizemore at (513) 648-3166 if you have any questions.

Sincerely,

A handwritten signature in black ink that reads 'William A. Hertel'.

William A. Hertel
