Purpose of Contact: Survey methodology concurrence for Building 771/774

Discussion

On February 23, 2004, project personnel met with CDPHE representatives to discuss the radiological survey methodology for portions of Building 771/774 that are greater than 6' below final grade. Results for Room 102 in Building 774 were provided to CDPHE. Survey results for the remainder of the Building 774 basement have also been provided. Based on the methodology (i.e., surveys and *in-situ* gamma measurements) and results, CDPHE concurred that those portions >6' below final grade in Building 774 (Rm. 102, 103 and Old Tank 40) have met the criteria identified in the *771/774 Closure Project Decommissioning Operations Plan Modification 5* (e.g., < 7 nCi/g volumetric Pu activity). Surficial contamination is less than 100 nCi/g. As a result, a flowable fill will be placed within these areas.

CDPHE representatives concurred with this activity.
