Discussion

Harlen Ainscough was notified today of a location change and activation of Unit 881.3b, Amalgamation of Elementary Mercury Contaminated with Radioactive Materials. Treatment will be conducted on the 750pad, Tent 5, Permacon East. Small amounts of mercury have been identified in legacy wastes and must be treated prior to offsite shipment. A seven-day notification is required prior to conducting this activity in a different location in accordance with the Site permit, but Harlen approved this treatment and has waived the seven-day waiting period. Work instructions for this treatment will be included in PRO-1691-750PAD-EPC, Appendix 1 attachment.
