Jan,

Can you place this email in the AR for B886 in association with the explosives usage.

Thanks

Kim Myers

Kim,

There are no air compliance issues associated with the drilling unit. The unit is considered a mobile source, since it is self-propelled, so fuel usage tracking will not be required.

Here are the specs we have on the unit that will be used to drill for explosive harmonic delamination of 886. Do we have to do any air monitoring for this unit? Please let me or Steve Nesta know, as they plan to start this early next week.

Thanks - Kim
