Mobile High Purity Germanium Gamma Ray Survey Unit

Johnny Reising, Associate Director, Environmental Management, Fernald Field Office

We are in receipt of your March 11, 1996, Memorandum (DOE-0594-96) requesting transfer of the remaining High Purity Germanium (HPGe) Gamma Ray Detectors and associated equipment. At this time we are unable to satisfy your request, however, we may be able to accommodate you later in the year. Currently the mobile detector unit is scheduled to be used on the Operable Unit 2 (OU-2) Trench T-3/T-4 Accelerated Action Project to do cleanup conformation and field verification. This project is a Contractor Performance Measure and is scheduled to be completed by September 30, 1996. Use of the HPGe unit saves the Contractor from taking and processing a significant number of samples over the duration of this project. The equipment will also be used later this year to do additional characterization and radiological hot spot detection at the OU-2 903 Pad. This site ranks as the second highest priority cleanup project at Rocky Flats Environmental Technology Site (Site). The area of contamination is several acres. Sampling of this area without the HPGe detector units would be hard to accomplish and expensive.

After the 903 Pad project we have no plans to use this equipment in the near term, however, we may still have uses for it in the future, especially in the Industrial Area. In the interest of saving money and team work, we may be willing to loan the equipment to you for specific time periods with the understanding that the Site would have priority in scheduling the equipment's use. If you would like to enter into an agreement to do this, we could produce an MOA loaning you the equipment.

The point of contact for more information on this subject is Dave George, our Environmental Restoration Progress Assessment Team Leader, at (303) 966-5669.
