REMINDER OF DECISION NOT TO CORE SAMPLE 207B SOUTH - SRK-026-95

Action: Process Letter to the Agencies

As was agreed in the February 1, 1995 Joint Working Group meeting, EG&G will secure core samples directly below 207C pond to gather characterization data on the soils beneath 207C. EG&G will not be required to investigate the soils beneath pond 207B South because the surrounding characterization studies have provided the data deemed necessary to adequately characterize those soils. A draft letter to agencies making record of this decision is attached for your convenience.

If you have any questions or concerns regarding this decision, please contact me at extension 8541 or Andy Ledford at extension 8673.

Gentlemen:

As agreed in the Joint Working Group meeting on February 1, 1995, Department of Energy (DOE) is making record of the decision to not core sample the soils beneath pond 207B South. As discussed with your staff, current data from the other 207B ponds and 207A pond has provided characterization data necessary for the closure option presented in the Proposed Interim Measure/Interim Remedial Action/Environmental Assessment Decision Document for Phase I remediation of the Solar Evaporation Ponds, Operable Unit 4 (OU 4). DOE will secure core samples of soils directly beneath 207C pond to complete characterization of those soils as agreed on August 2, 1994.

Please contact me at 966-5899 for further discussion concerning this agreement.

Sincerely,

Briand Wu
Environmental Restoration
