MEETING TO DISCUSS D&D ISSUES

Discussion:

With permission from John Whiting (K-H), Gary Guinn arranged a meeting with Chris Gilbreath to discuss the draft strategy for regulatory involvement with D&D. Attendees were Gary Guinn, Kirk Ticknor, Jeff Bray (all RMRS), Debbie Mauer (DOE), and Chris Gilbreath.

In summary, Gary laid out the process whereby CDPHE will approve generic strategies for characterization and D&D of buildings, generic closure plans for RCRA units, and specific D&D plans when those plans contain activities requiring regulator approval and those activities are not covered by the generic approvals. Specific plans are expected to be required for less than 20% of the D&D projects on site. Gary's draft strategy was well received by Chris.

I then discussed a specific issue with respect to the pilot D&D of Bldg 889. I told Chris that a small portion of a RCRA tank system (i.e., 2 sumps and a run of piping) will be affected by the pilot D&D of Bldg 889. Specifically, the concrete sumps will be scabbled to a clean surface and the piping will be removed and managed as hazardous waste. I told Chris that we would prefer to not prepare and submit a partial closure plan for this minor work. Instead, as we have agreed in the past to do for small portions of systems being stripped out, we will document what we have done after the work is done, keep the information with our closure files for the unit affected, and provide CDPHE with a copy. Chris said he would get back to me next week to let me know if that would be OK.

Follow-up required:

Gary will be presenting the D&D regulator involvement strategy again next week to K-H, DOE, and CDPHE.
