Purpose of Contact: Permission to regrade B452 area

Discussion As described in the IASAP Addendum #IA-02-05 for IHSS Group 400-7, 4 locations were to be sampled in the area immediately adjacent and under B452. In addition, 2 samples were collected at soil piles in the B850 and B452 areas that were derived from the B452 area.

Of these samples, there are 2 locations where the arsenic concentration is 20, exceeding the arsenic background value. One is at the soil pile near B850, the other is a sample from a transformer pad next to Central Ave not related to B452. Arsenic was not used at these locations and the value of 20 is well within the range of values we see at other non-impacted locations even though it is slightly above the official background value.

The remaining soil data from B452 soils are well below Tier 1 and Tier 2 action levels. Based on this data, the B452 area can be regraded.
