**Purpose of Contact** IHSS Group 700-3 – B778 sample relocation

**Discussion**

The westernmost building 778 sample locations were walked down on January 14, 2004 with the CDPHE, Field Sampling team and document preparation staff to discuss field conditions. At location CE44-011, the concrete slab is too thick for the coring equipment to get through, in excess of 30 inches thick.

Location CE44-011, located on the west end of the building and biased for the OPWL, cannot be offset within the building and remain over the OPWL because of the thicker slab in this area. This location was relocated to the north and redrilled, however, the location is not representative of the OPWL. Moving this location to the east or south places it fairly close to other biased OPWL locations in this area. This sample location will be moved outside the building along the NWPL.
