Purpose of Contact Potential Buried Object at 500-4

Discussion

As described in the ER contact record dated February 19, 2004, a metallic object was previously identified within IHSS Group 500-4 that was to be removed if it was within 3 feet of the surface

This object was attempted to be located on April 19, 2004 as follows

- The coordinates from the previous geophysical survey were located in the field and a magnetometer was then used to locate an area about one foot wide
- A location in the center was cored to a depth of 6 feet with very good recovery Close examination of the core found no metallic debris
- The original location from the geophysical survey and the recent magnetometer reading location were then cored to a depth of 4 feet No metallic debris was noted

Based on this, it was agreed that there wasn't an object present that required removal
