RE: No Further Accelerated Action (NFAA) Request for IHSS 143 (B771) - Approval

Dear Mr. Legare:

The Colorado Department of Public Health and Environment, Hazardous Materials and Waste Management Division has reviewed the NFAA request for IHSS 143 (771 Outfall, PAC 700-143), dated July 6, 2004. This request was initially submitted to us on June 4, 2004 and has been revised based on discussions at several ER Comment Resolution Meetings. Based on the information contained in this document and previously agreed upon modifications to be made, the Division is hereby approving this request for NFAA, as modified.

Although we are approving NFAA for IHSS 143, there may still be the potential for radiological contamination to exist at depth in this area. As such, appropriate precautions, including Radiological Control Technicians (RCT) involvement, need to be implemented during the proposed culvert and storm drain removal, and drainage reconfiguration that is planned to occur in this area. Considering that this area may be excavated and exposed to direct surface water exposure and erosion, contamination that may be identified may need to be removed if necessary to prevent surface water degradation above appropriate levels, even if the levels in the soil do not exceed the WRW Levels. The consultative process needs to be utilized to properly discuss future activities and address contamination that may be found during future activities in this area.

If you have any questions regarding this correspondence please contact me at (303) 692-3367, David Kruchek at (303) 692-3328, or Harlen Ainscough at (303) 692-3337.
