**Agency:** CDPHE

**Purpose of Contact:** IHSS Group 500-3 – Sample Depth

**Discussion**

Two sample locations targeted the sump inside the B528 Pit; CE43-002 was located inside B528 Pit within the sump and CE43-003 was located outside the B528 Pit and targeted the sump interval. Location CE43-002 was collected inside the B528 Pit and within the sump pit. The full suite of analytes originally planned for CE43-003 were collected at this location. Sample results show that no exceedances of the WRW action levels were present at this location. Most of the analytes were below background or nondetects. However, CE43-003 was sampled to the base of the 528 Pit, and did not reach the depth of the sump.

The intent of the two locations was to characterize the extent of contamination associated with the sump inside the B28 Pit. CE43-002 adequately addresses this intent. Therefore, an additional, deeper interval at location CE43-003 will not be collected.
