Purpose of Contact: Confirmation samples for 400-7

Discussion

Confirmation samples will be collected for the 400-7 fuel oil remedial action as follows:

- One sample will be collected from each side wall at about the level of the tank bottoms, approximately 8 feet above the bottom of the excavation
- One sample will be collected from the bottom of the excavation at the lowest point; south of Tank 1
- Samples will be collected in the middle and at the eastern end of the excavation for the fuel oil stained soil that followed the oil line to the east. Samples will be collected from the bottom and sidewalls of the excavation. Sidewall samples will be collected at approximately the level of the fuel oil line.

Samples will be analyzed for TPH at an offsite lab. Backfill will be based on field screen results. Additional excavation may be required based on the analytical results.

Visual and photographic evidence indicates that the oil contamination has been removed and the photos will be included in the closeout report. Therefore, the concrete tank support beams may be left in-place. The easternmost tank support fell over within the excavation as a result of excavation activities. The area around this support was already remediated. Therefore, no further action is required for this support. The remaining supports may be pushed over if necessary for safety and stability.
