Additional Information

B439 was a 5140 square foot single story building constructed in 1971. The structure was a pre-fabricated insulated metal building constructed on a concrete slab, and was configured with a high bay and several smaller machine rooms and offices.

B439 was originally a fabrication and machine shop, supporting B440, R&D, and other operations, including an organic coatings lab, NDT, ultrasonic density testing, tensile testing, electronic equipment services, gamma survey instrument maintenance and radiological counting and survey operations.

Immediately prior to demolition, the facility was used to store equipment, as a break room, and general offices in support of B440 operations.

The following utilities were associated with B439, and were removed prior to demolition: electrical, plant water, plant sanitary, plant steam, and overhead sprinkler systems. See attached map for disconnect locations.
