The Form R submittal is being provided in both hard copy and electronic media via the enclosed diskette. Please note that the enclosed Form R has two signature blocks so that DOE RFO and EG&G Rocky Flats Inc may sign concurrently. Also enclosed (Enclosure III) is a letter to the EPCRA Reporting Center (a printout from the diskette sent to us by EPA) that must be signed and attached to the diskette when sent to EPA.

Data contained in this report were compiled by various staff members based on information gathered in some cases from third parties and analyzed in accordance with standard techniques and with the application of professional judgement. Based on these assessments and to the best of our knowledge the data provided in the Form R report for 1992 is accurate and valid.

We recognize that improvements are needed in our chemical tracking procedures and we are implementing a number of actions to prevent similar problems in our future Tier II and Form R submittals. These actions include:

A review of all operations involving chemical storage and use in remediation activities will be conducted and a report will be provided to your office by July 16 1993. Corrective actions will be identified and entered into the Plant Action Tracking system.

The Chemical Tracking Procedure a Level 1 procedure governing plantwide implementation of methods to track chemical storage and use will be completed by September 15 1993 in accordance with the enclosed action plan (Enclosure III).

Training will be conducted for management and users on chemical tracking procedures. This training is scheduled for FY94 and is reflected in work package #61601.

We are reviewing our TIER II submittal for 1992 to determine if changes are required to reflect additional chemical storage. Changes in the storage amounts for previously reported chemicals and the addition of new hazardous chemicals to the report may be necessary. Any required changes in the TIER II submittal will be delivered to your office by July 8 1993.
