000032800

# Final
# Phase III RFI/RI

## Rocky Flats Plant
## 881 Hillside Area

(Operable Unit No. 1)

**June 1994**

ADMIN RECORD

**OVERVIEW**
**TABLE OF CONTENTS**

## *VOLUME I*

**SECTION 1—INTRODUCTION** (Text, Tables, and Figures)

**SECTION 2—OU1 FIELD INVESTIGATION** (Text, Tables, and Figures)

**SECTION 3—PHYSICAL CHARACTERISTICS OF OU1** (Text, Tables, and Figures)

## *VOLUME II*

**SECTION 4—NATURE AND EXTENT OF CONTAMINATION** (Text, Tables, and Figures)

**SECTION 5—CONTAMINANT FATE AND TRANSPORT** (Text, Tables, and Figures)

**SECTION 6—BASELINE RISK ASSESSMENT** (Text, Tables, and Figures)

**SECTION 7—SUMMARY AND CONCLUSIONS**

**SECTION 8—REFERENCES**

## *VOLUME III*

**APPENDIX A — GEOLOGIC DATA**
A1 DRILLING AND SAMPLING DATA

## *VOLUME IV*

**APPENDIX A — GEOLOGIC DATA**
A2 GEOTECHNICAL DATA
A3 SURVEYING DATA
A4 FRENCH DRAIN GEOLOGIC DATA

## *VOLUME V*

APPENDIX A — GEOLOGIC DATA
- A4 FRENCH DRAIN GEOLOGIC DATA (continued)
- A5 HOT SPOT INVESTIGATION

## *VOLUME VI*

APPENDIX B — HYDROGEOLOGIC DATA
- B1 BOREHOLE AND SINGLE WELL TEST DATA
- B2 MULTIPLE WELL TEST DATA
- B3 GROUNDWATER ELEVATION DATA
- B4 FRENCH DRAIN HYDROGEOLOGIC ASSESSMENT
- B5 SURFACE WATER FLOW DATA
- B6 GROUNDWATER CONTAMINANT MIGRATION VELOCITY CALCULATIONS

## *VOLUME VII*

APPENDIX C — ANALYTICAL DATA
- C1 BACKGROUND SOIL DATA
- C2 STATISTICAL SUMMARIES
- C3 PHASE III SUBSURFACE SOIL SAMPLES
- C4 SURFACE SOIL SAMPLES
- C5 SURFACE WATER
- C6 SEEP/SPRING WATER
- C7 SEDIMENTS
- C8 GROUNDWATER
- C9 FIELD PARAMETER DATA FOR OU1 GROUNDWATER MONITORING
- C10 BIOLOGICAL TISSUE SAMPLES
- C11 PHASE III FIELD PROGRAM UNIQUE SAMPLES
- C12 AIR QUALITY
- C13 SUBSURFACE SOIL CONTAMINANT SUMMARY

## *VOLUME VIII*

APPENDIX D — DETERMINATION OF CONTAMINANTS

*VOLUME IX*

APPENDIX E — ENVIRONMENTAL EVALUATION

*VOLUME X*

APPENDIX F — PUBLIC HEALTH EVALUATION

*VOLUME XI*

APPENDIX G — QUALITY ASSURANCE

APPENDIX H — TECHNICAL MEMORANDA

*VOLUME XII*

APPENDIX I — RESPONSES TO AGENCY COMMENTS

APPENDIX J — DISTRIBUTION LIST

# APPENDIX C—ANALYTICAL DATA
# TABLE OF CONTENTS

**Appendix** **Title**

**C1 BACKGROUND SOIL DATA**
Semivolatile Organic Compounds
Pesticide/PCBs
Total Metals
Total Radiochemistry
Water Quality Parameters

**C2 STATISTICAL SUMMARIES**
Subsurface Soil
- Total Metals
- Total Radiochemistry
- Volatile Organics
- Semivolatile Organics
- Pesticide/PCBs
- Water Quality Parameters

Surface Soil
- Total Metals
- Total Radiochemistry
- Volatile Organics
- Semivolatile Organics
- Pesticide/PCBs
- Water Quality Parameters

Surface Water
- Total Metals
- Filtered Metals
- Total Radiochemistry
- Filtered Radiochemistry
- Volatile Organics
- Semivolatile Organics
- Pesticide/PCBs
- Water Quality Parameters

## APPENDIX C—TABLE OF CONTENTS
(continued)

| Appendix | Title |
|---|---|
| | Seep/Spring Water |
| | Total Metals |
| | Filtered Metals |

| C12 | AIR QUALITY |

## APPENDIX C—TABLE OF CONTENTS
(continued)

| Appendix | Title |
|---|---|
| C13 | ANALYTICAL DATA SUMMARIES |
| | Phase I and II<br>Subsurface Soil Contaminants |
| | Phase I and II<br>Surface Water Contaminants |
| | Phase I and III<br>Sediment Contaminants |
| | Phase I and II<br>Groundwater Contamiants |

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

| pyrene | 350 | U | JA | 370 | U | JA | 370 | U | JA | 380 | U | JA | 480 | U | V |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background

Notes: Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detectio limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Notes: Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detectio limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detectio limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CROL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background

Notes: Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background

Notes: Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background

Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detectio limit is greater than 2 times the CRQL, the data point is not used.

* No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit is greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

• No Upper Tolerance Limit - value is maximum value for Background
Site means are calculated by first calculating a mean for each location and then calculating a grand mean. Site standard deviations are calculated using the grand mean and the means from individual locations. Non-Detects: In calculating the mean for each location, one-half the detection limit is used for non-detects; if the detection limit i greater than 2 times the CRQL, the data point is not used.

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pasticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confirmed by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

| phenanthrene | 370 | U | | 370 | U | V | 380 | U | V | 390 | U | | 430 | U | V |
| phenol | 370 | U | | 370 | U | V | 380 | U | V | 390 | U | | 430 | U | V |
| pyrene | 370 | U | | 370 | U | V | 380 | U | V | 390 | U | | 430 | U | V |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

| phenanthrene | 410 | U | | 410 | U | | 390 | U | | 430 | U | V | 410 | U | V |
| phenol | 410 | U | | 410 | U | | 390 | U | | 430 | U | V | 410 | U | V |
| pyrene | 410 | U | | 410 | U | | 390 | U | | 430 | U | V | 410 | U | V |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

U - Undetected, analyzed for but not detected
X - Result by calculation-GRRASP

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone
