Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Organic qualifiers: U-analyzed/not detected; J-estimated value; C-pesticide results confimred by GCMS; B-found in sample and associate blank;
E-exceeds calibration range/ value estimated; D-dilution; X-estimated value / interference from another compound; Z-value cannot be estimated/ interference from another compound

REAL - Field Sample; DUP - Field Duplicate.
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

Note: Data reporting order: result, qualifier, validation code.
Validation Codes: V-valid; A-acceptable with qualifications; R-rejected; B-found in blank; E-value > calibration range; JA-estimated, acceptable; U-not detected at/above method det. limit
Inorganic qualifiers: U-analyzed/not detected; B-value < Contract Required Detection Limit (CRDL) and > Instrument Detection Limit (IDL); E-estimated because of interference; J-estimated;
N-spike recovery out of control limits; S-determined by method of standard additions (MSA); *-duplicate out of control limits; W-post-digestion spike out of control limits;
I-interference; +-correlation coefficient for MSA < 0.995; X-detection limit high because of matrix interference; X-result by calcuation (GRRASP)
REAL - Field Sample; DUP - Field Duplicate
RFA - Rocky Flats Alluvium; COL - Colluvium; VFA - Valley Fill Alluvium; KAR - Arapahoe/Laramie Formation; WCS - Weathered Claystone

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

(arithmetic mean). The error term "b" accounts for the propagated statistical counting uncertainty for the sample and the associated analytical blanks at the 95 percent confidence level. These error terms represent a minimum estimate of error for the data.

detecting that material in an appropriate blank sample (Type I error). In the formulation below, both $\alpha$ and $\beta$ are equal to 0.05.

Based on the approach presented in draft ANSI Standard N13.30, Performance Criteria for Radiobioassay (HE85) the formulation of the MDA for radioactive analyses is:

$$MDA = \frac{4.65\ S_B + 2.71/\ (T_S E_S Y)}{aV}$$

where:

MDA = minimum detectable amount (microcuries [$\mu$Ci] or picocuries [pCi])

$S_B$ = standard deviation of the population of appropriate laboratory blank values (disintegrations per minute, d/m)

$T_S$ = sample count time (minutes, m)

$E_S$ = absolute detection efficiency of the sample detector

Y = chemical recovery for the sample

a = conversion factor (d/m per unit activity)

(a = 2.22 disintegrations per minute per picocurie [d/m/pCi] when MDA is in units of pCi, and a = $2.22 \times 10^6$ disintegrations per minute per microcuries [d/m/$\mu$Ci] when MDA is in units of $\mu$Ci)

V = sample volume or weight (V=1 if the MDA per sample is desired)

The major component of the MDA equation is the variability of the laboratory blanks.

Table C12-3 shows the various formulas used for alpha data reduction during 1990 and 1991. These values are based on the average sample volume, typical detector efficiency, detector background, count time, and chemical recovery. MDA values calculated for individual analyses may vary significantly depending on actual sample volume, chemical recovery, and analytical blank used.

## C12.3 REPORTING OF MINIMUM DETECTABLE CONCENTRATION AND ERROR TERMS

Measured plutonium, uranium, americium, tritium, and beryllium measured concentrations are presented in this report. Most of the measured concentrations are at or very near background levels, and often there is little or no amount of these materials in the media being analyzed. When this occurs, the results of the laboratory analyses can be expected to show a statistical distribution of positive and negative numbers near zero and numbers that are less than the calculated minimum detectable concentration for the analyses. The laboratory analytical blanks, used to correct for background contributions to the measurements, show a similar statistical distribution around their average values. Negative sample values result when the measured value for a laboratory analytical blank is subtracted from a sample analytical result that is smaller than the analytical blank value. Results that are less than calculated minimum detectable levels indicate that the results are below the level of statistical confidence in the actual numerical values. All reported results, including negative values and values that are less than minimum detectable levels, are included in any arithmetic calculations on the data set. Reporting all values allows all of the data to be evaluated using appropriate statistical treatment. This assists in identifying any bias in the analyses, allows better evaluation of distributions and trends in environmental data, and helps in estimating the true sensitivity of the measurement process.

The reader should use caution in interpreting individual values that are negative or less than minimum detectable levels. A negative value has no physical significance. Values less than minimum detectable levels lack statistical confidence as to what the actual number is, although it is known with high confidence that it is below the specified detection level. Such values should not be interpreted as being the actual amount of material in the sample, but should be seen as reflecting a range form zero to the minimum detectable level in which the actual amount would likely lie. These values are significant, however, when taken together with other analytical results that indicate that the distribution is near zero.

Error terms in the form of $a \pm b$ are included with some of the data. For a single sample, "a" is the analytical blank corrected value; for multiple samples, "a" represents the average value

analyzed for individual specific isotope and/or further investigated to determine the cause and any needed corrective action.

All samples scheduled for alpha spectral analysis are analyzed in a similar manner regardless of matrix. Before dissolution, a known quantity of nonindigenous radioactive tracer is added to each sample. The tracer is used to determine the chemical recovery for the analysis. Tracers used include plutonium-236, plutonium-242, uranium-232, uranium-236, americium-243, and curium-244. The type and activity level of the tracer used depends on the type and projected activity level of the sample to be analyzed. All refractory or intractable actinides are dissolved by vigorous acid treatment using both oxidizing and complexing acids. After samples are dissolved, the radioisotopes of concern are separated from each other and from the matrix material by various solvent extraction and ion exchange techniques. The purified radioisotopes are electro-deposited onto stainless steel discs. These discs are alpha counted for 12 hours. If a lower minimum detection limit is required, samples may be counted from 72 to 168 hours, depending on the specific sensitivity requirement. Samples that exhibit a chemical recovery of less than 10 percent or greater than 110 percent of the tracer are automatically scheduled for reanalysis.

## C12.2 DETECTION LIMITS AND ERROR TERM PROPAGATION FOR RADIOACTIVITY PARAMETERS

Health and Safety Laboratories have adopted the following definition for detection limit, as given by Harley (HA72):

> The smallest amount of sample activity using a given measurement process (i.e., chemical procedure and detector) that will yield a net count for which there is confidence at a pre-determined level that activity is present.

The minimum detectable amount (MDA) is the term used to describe the detection limit and is defined as the smallest amount of an analyzed material in a sample that will be detected with a "b" probability of nondetection (Type II error), while accepting an "a" probability of erroneously

# APPENDIX C12
# AIR QUALITY

Air quality data collected as part of the Radioactive Ambient Air Monitoring Program for 1990 and 1991 is presented in Table C12-1. Air quality data collected from four high-volume OU1 site-specific air samplers for 1990 and 1991 are presented in Table C12-2.

Health and Safety Laboratories routinely perform the following analyses on environmental air samples:

- Total air filter counting (plutonium-specific alpha)
- Gas proportional counting (gross alpha and gross beta)
- Gamma spectral analysis
- Alpha spectral analysis (plutonium-239,-238, americium-241, uranium-238,-233,-234)

Procedures for these analyses are described in the Health and Safety Laboratories Procedures and Practices Manual (WI82). All new procedures and changes to existing procedures must be thoroughly tested, documented, and approved in writing by the manager of Health and Safety Laboratories before being implemented. Environmental Management is notified of any major changes that could affect analytical results. All procedures are reviewed annually (or at any time an analytical problem is suspected) for consistency with state-of-the-art techniques. Copies of all procedures are kept on file in the office of the manager of Health and Safety Laboratories.

## C12.1 ANALYTICAL PROCEDURES

Samples received for air filter screening are counted at approximately 24 hours and then 48 hours after collection. Samples exceeding specified limits are recounted. If the total long-lived alpha concentration for a screened filter exceeds specified action limits, the filter sample is then

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |

# Key to Qualifiers and Codes

## Organic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| J | - | estimated value |
| C | - | pesticide results confirmed by GCMS |
| B | - | found in sample and associated lab blank |
| E | - | exceeds calibration range / value estimated |
| D | - | dilution |
| X | - | estimated value / interference from another compound |
| Z | - | value cannot be estimated / interference from another compound |

## Inorganic Data Qualifiers

| | | |
|---|---|---|
| U | - | analyzed / not detected |
| B | - | value < contract required detection limit (CRDL) and > instrument detection limit (IDL) |
| E | - | estimated because of interference |
| J | - | estimated |
| N | - | spike recovery out of control limits |
| S | - | determined by method of standard additions (MSA) |
| * | - | duplicate out of control limits |
| W | - | post-digestion spike out of control limits |
| I | - | interference |
| + | - | correlation coefficient for MSA < 0.995 |
| X | - | result by calculation (GRRASP) |

## Validation Codes

| | | |
|---|---|---|
| V | - | valid |
| A | - | acceptable with qualifications |
| R | - | rejected |
| B | - | found in blank |
| E | - | value > calibration range |
| JA | - | estimated, acceptable |
| U | - | not detected at/above method detection limit |

## Field Sample QC Codes

| | | |
|---|---|---|
| REAL | - | field sample |
| DUP | - | field duplicate |
| RNS | - | rinsate blank |
| SPLT | - | field split |
| TB | - | trip blank |
| FB | - | field blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |

## Geologic Formation Codes

| | | |
|---|---|---|
| RFA | - | Rocky Flats Alluvium |
| COL | - | Colluvium |
| VFA | - | Valley Fill Alluvium |
| WCS | - | Weathered Claystone |
| KAR | - | Arapahoe/Laramie Formation |

==========

## Laboratory QC Sample Codes (list is informational - lab QC codes not referred to in report)

| | | |
|---|---|---|
| BLK | - | blank |
| BS | - | blank spike |
| BSD | - | blank spike duplicate |
| DUP | - | laboratory duplicate |
| LCS | - | laboratory control sample |
| MB | - | method blank |
| MS | - | matrix spike |
| MSD | - | matrix spike duplicate |
| SD | - | spike duplicate |
| SPK | - | spike |
| SUR | - | surrogate |
| DIL | - | dilution |
| TIC | - | tentatively identified compound |
| TRG | - | target |
| REP | - | replicate |
| RB | - | reagent blank |
| DL | - | normal 1st run dilution |
| DL2 | - | 2nd analysis run dilution |
| BS1 | - | blank spike |
| BS2 | - | blank spike |
| BS3 | - | blank spike |
| BS4 | - | blank spike |
| DL1 | - | dilution |
| DL3 | - | dilution |
| LD | - | lab duplicate |
| PB | - | prep blank |
| R | - | replicate or reanalysis |
| S | - | spike |
| S1 | - | spike |
| S2 | - | spike |
| SP | - | spike |
| REX | - | re-extraction |
