Plutonium/Americium Colloid Study

J.M. Kersh, Associate General Manager
Environmental Restoration and Waste Management
EG&G Rocky Flats, Inc

In June 1990, a study was initiated to characterize the size fraction of plutonium and americium in the 903 Pad area surface water seeps. The data has been available for some time but no summary report has been forwarded. Verbal promises for a summary report have been repeatedly made to ERD staff. Please commit to a date for submittal of a summary report within two weeks of this memo.

In addition, please forward the raw data (hard copy and on IBM computer diskette in ASCII format) from the study. The diskette should also be forwarded within two weeks.

If you have any questions, please feel free to contact Scott Grace of my staff at extension 7199.
