Background Data Comparison and Contaminants of Concern Identification Process Flow to Operable Unit 7 (OU-7), Present Landfill

Robert Benedetti, Associate General Manager
Environmental Restoration Management
EG&G Rocky Flats, Inc.

On Tuesday May 18, 1993, a meeting was held to discuss the issue referenced above. At that time, DOE/RFO directed the EG&G OU-7 Project Manager to pursue development of a proposal for an approach for background comparisons/COC identification for OU-7. The intent of this action was to identify a methodology that, in the opinion of EG&G, was the precedence set by other OU's or that which was detailed in the current OU-7 Phase 1 RFI/RI Work Plan.

EG&G has since submitted a draft process flow chart and accompanying text to the DOE/RFO technical lead for risk assessment. This process flow has been determined to be an acceptable approach for OU-7 to implement.

DOE directs EG&G to implement this approach during development of the contaminants of concern technical memorandum for the OU-7 and OU-3 human health risk assessment. DOE recognizes that this approach deviates from the original approach detailed in the Phase I Work Plan.

Please contact R. H. Birk of my staff should you need further clarification.

Richard J. Schasburger
Acting Director
Environmental Restoration Division
