SUBJECT: INADEQUATE SECONDARY CONTAINMENT - EML-174-93

Ref: R. D. Copp ltr (RDC-024-93) to Distribution, Same Subject,
March 2, 1993

The Solar Ponds trench sump line will be abandoned in place when the new modular storage tanks are placed in service. Currently, we plan to place these tanks in service April 16, 1993. The line will be included in the OU-4 final remedial action for final disposition. The transfer line that runs from B774 through B776 and to B374 is provided to us by building operations. Any changes to that line should be worked through building management. It is our understanding that D. R. Jackson and J. M. Bower will fund and plan any corrective work in the buildings.

If you have any questions, or require additional information please contact K. C. London on extension 8585.
