Mr. Randy Ogg
Environmental Restoration Program
EG&G Rocky Flats
P.O. Box 464, Building 080
Golden, Colorado 80402-0464

Dear Mr. Ogg:

On Monday April 4, 1994, you requested that ES prepare a package addressing the discussions that have taken place between EG&G, DOE, CDH, and EPA concerning the need for additional drilling in the Solar Evaporation Ponds (SEPs). This letter serves to provide the requested information. At the team meeting on Tuesday February 1, 1994 EG&G informed the CDH and EPA that they intended to clean close SEP 207-C. The soils would be excavated to the level of the mean seasonal high water table elevation if necessary. EG&G then informed the regulatory agencies that it would not be necessary at this time to complete the drilling in SEP 207-C or SEP 207-B South because the contaminated soils would be excavated with appropriate disposition. It was discussed that real time sampling and analysis would be performed to guide the excavation, and that final verification sampling would be performed to demonstrate clean closure.

The CDH indicated that RCRA characterization data for SEP 207-C and SEP-207-B South was required. However, the submittal of characterization data could be deferred until the remedial excavation. CDH stated that DOE would meet the characterization requirements specified in the RFI/RI work plan by conducting analyses at 3 locations during remedial excavation.

Attached is a copy of the February 1 meeting minutes which captured the agreements. It should be noted that neither the CDH nor the EPA commented or disagreed with the minutes when they were reviewed at the team meeting on february 8, 1994.

Please feel free to call me at 831-8100 ext. 8811 if you require additional information.

Sincerely,

Philip A. Nixon
Project Manager: Solar Pond IM/IRA
