

INTEROFFICE MEMORANDUM

DATE. December 12, 1995

TO Steve Hahn, ER/WM

FROM: Mary Lee Hogg, ER/WM P&I <sup>MLH</sup>

SUBJECT RFI/RI, Human Health Risk Assessment, OU 6

Per your request, I have reviewed the Human Health Risk Assessment in the RFI/RI for OU 6 with a specific focus on its alignment with the Site Vision dated 11/7/95. I found no instance in which the results and recommendations of the RI conflicted with the Vision. However, I do have a question concerning the IHSS 166 trenches. The groundwater underlying these trenches is contaminated. The potential impacts of this contamination are addressed in the OU 7 IM/IRA. I am unsure whether these trenches are considered part of Area 0 or Area 3. One would assume that they are part of Area 0 (the landfills), in which case capping of the area would be in alignment with the Vision. However, the Vision states that groundwater in Area 3 ". will be protective for all uses". We need to make sure that the trenches are considered as part of Area 0 and that any management of the groundwater involved is in agreement with the Vision, which states that " DOE will monitor and control ground water to prevent migration and preserve the integrity of the landfills ". If you have any questions concerning my comments, please contact me at 8465
