

From: [DOE Office of Legacy Management](#)
Subject: FW: DOE has posted contact record RFLMA CR 2014-05, Reportable condition for evaluation purposes of uranium at POC location WALPOC, to the Rocky Flats Legacy Management website.
Date: Wednesday, May 14, 2014 4:34:37 PM

The email notification below incorrectly references RFLMA Attachment 2, Figure 6, Points of Evaluation. The reference should be to Figure 5, Points of Compliance. The posted contact record correctly references Figure 5.

I apologize for the confusion.

Subject: DOE has posted contact record RFLMA CR 2014-05, Reportable condition for evaluation purposes of uranium at POC location WALPOC, to the Rocky Flats Legacy Management website.

The U.S. Department of Energy has posted contact record [RFLMA CR 2014-05](#) to the Rocky Flats Legacy Management website on the Public Involvement page at http://www.lm.doe.gov/Rocky_Flats/Sites.aspx?view=5.

This contact record addresses a reportable condition for evaluation of uranium at Point of Compliance (POC) location WALPOC.

The evaluation was performed in accordance with Rocky Flats Legacy Management Agreement (RFLMA) Attachment 2, Figure 6, "Points of Evaluation," and resulted in a calculated 30-day average concentration for uranium of 16.9 µg/L on December 18, 2013. This amount exceeds the RFLMA-applicable Table 1 standard of 16.8 µg/L. Validated results were received on February 3, 2014, and notification to the regulatory agencies and the public—in accordance with RFLMA Attachment 2, Figure 6—was made by e-mail on February 13, 2014. Representatives of the regulatory agencies and DOE met on February 18, 2014, to discuss this result and develop a path forward. RFLMA CR 2014-05 documents these discussions.
