Subject: Notification of Reportable Condition at AOC well 10304
Date: Thursday, December 03, 2015 2:44:43 PM

Carl, Vera:

I am sending this email on behalf of Scott.

Analytical results for the fourth-quarter 2015 sample collected October 29, 2015 from AOC well 10304, located downgradient of the 903 Pad/Ryan's Pit Plume, were validated on December 1, 2015. The concentration of TCE in this sample was reported at 72 ug/L. The corresponding RFLMA standard is 2.5 ug/L. As discussed in the second-quarter 2015 report, the concentration of the sample collected during that quarter (15 ug/L) also exceeded the TCE standard. Because this fourth-quarter sample represents the second consecutive routine semiannual sample in which concentrations have exceeded a RFLMA standard, in accordance with RFLMA Attachment 2, Figure 7, a reportable condition exists at this AOC well.

The information above was provided to the CDPHE during a telephone call on December 1, 2015.

Per Figure 7, the agencies are to be notified within 15 days of receipt of validated data confirming a reportable condition. This email serves as formal notification of the reportable condition. A Contact Record will be developed with the required evaluation plan and schedule, and will be provided to you within the required 30 day period (i.e., before December 31, 2015).

Please contact Scott or me if you have any questions.

Thank you,

John
