COMPLETION OF SECOND QUARTER 1991 GROUNDWATER MONITORING - JMK-0332-91

The second quarter groundwater sampling program was completed on Friday, June 21, 1991, one week ahead of schedule. All 259 wells in the current program have been sampled, including all RCRA, CERCLA, and site-wide wells.

As a result of routine EMAD QA/QC checks, the determination was made that a single RCRA well located in the Protected Area (PA) had not been sampled. This well was subsequently sampled within the second quarter, and the program remains in compliance.

As you know, EMAD has submitted to DOE a well evaluation list outlining the current well network, suggested changes in sampling frequency, and well classification. If approved by DOE, this new well list will reduce the number of samples collected and greatly improve utilization of the subcontractor sampling crews, as well as reduce laboratory analytical costs.

In an effort to further improve the management of the program, EMAD now requires the subcontractor to supply a detailed sampling schedule for all wells prior to each quarter. The schedule will be used as a checklist against which the sampling performance can be measured. This and other changes in the program will insure that the groundwater monitoring program remains in compliance with state and federal regulations.
