The following twelve owners have declined access to their property. In each case, an alternate site was identified and a new Use Agreement with an alternate property owner was initiated. Alternate sample sites are located based on criteria discussed at a meeting with EPA, CDH, DOE/RFO, EG&G and the OU 3 subcontractor on July 22, 1992. Criteria identified at this meeting include avoiding disturbed soil locations and obtaining samples within an homogenous land use area when possible. Also, alternate sample locations will be placed as close to the original location as possible.

180, and 184 Several landowners are not in Colorado and will not communicate with us A positive alternate landowner has not yet been identified Alternate sampling locations will be pursued until an acceptable location is found

Thirty-seven sample locations have completed Use Agreements that have been sampled or will be sampled as soon as the existing snow cover is melted Surface soil sampling has not been possible since before Thanksgiving due to the continuous snow cover

Most landowners have been very cooperative, especially the local governments. The process is often very time consuming, often requiring legal counsel on both sides during the negotiation phase
