Enclosed is the proposed test plan for the Solidification/Stabilization Study to be conducted at Rocky Flats Environmental Technology Site. This test plan was discussed briefly as part of the Treatability Studies monthly meeting held on September 22, 1994.

The purpose of this study is to investigate the application of cementation as a treatment step for soils and residues remaining from soils processing. The contaminants of concern for this study will be heavy metals and radionuclides. The cemented product will be tested by Toxic Characteristic Leach Procedure to determine if any of the contaminants held in the matrix are available to be mobilized.

Please review this test plan and return any comments by October 21, 1994. If you have any questions, please contact Norma Castañeda at extension 4226.

Sincerely,

Steven W. Slaten
IAG Project Coordinator
Environmental Restoration
