Mr. Joe Schieffelin, Unit Leader  
Hazardous Waste Facilities  
Colorado Department of Public Health and Environment  
4300 Cherry Creek Drive South  
Denver, Colorado 80222-1530

Gentlemen:

Enclosed is the treatability test report for the Adsorption test work conducted at Rocky Flats Environmental Technology Site (Site). The transmittal of this report is partial fulfillment of the November 12, 1994, milestone for the Site Wide Treatability Studies program.

The objective of the study focused on the removal of uranium and selenium from selected groundwater samples at the Site. The test work was carried out during the spring and summer of 1994. Based on the results of this test work, adsorption is a viable process for removing uranium from groundwater. However, selenium was not removed as effectively as the uranium.

The Department of Energy requests that you acknowledge receipt of this report prior to October 28, 1994. If you have any questions please contact Norma Castaneda at 966-4226.

Sincerely,

  
Steven W. Slaten  
IAG Project Coordinator
