MAR 7 1986

Mr. Norman Drubner
P.O. Box 346
Waterbury, Connecticut 06720

Dear Mr. Drubner:

As you may know, the Department of Energy is implementing a program to evaluate the radiological condition of sites that were utilized under the Manhattan Engineer District and/or the Atomic Energy Commission (AEC) in the early years of nuclear energy development. The site at 414 Meadows Street, Waterbury, Connecticut, known as the former American Brass Company site, was identified as one such site.

This letter and the enclosed elimination report, which represent the results of the Department's review to determine if the site contains residual radioactivity traceable to activities conducted on the behalf of the AEC, is being provided to you, as owner of the property, for your information. Based on this review, the Department of Energy has concluded that no potential exists for radioactive contamination above current guidelines at this site. Therefore, no further action regarding this site is deemed necessary, and the site is being eliminated from further consideration under the Department's Formerly Utilized Sites Remedial Action Program.

The State of Connecticut is being informed of the action by copy of this letter. In accordance with Department policy, the enclosed elimination report and supporting documentation will be archived by the Department of Energy and will also be available, in the future, for public review at the Department's Public Reading Room located in Room 1E-190 of the Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C.

If you have any questions regarding this decision or the date of availability of material at the reading room, please contact me at 301-353-4716.

Sincerely,

Edward G. DeLaney

Edward G. DeLaney, Director
Division of Facility and Site
Decommissioning Projects
Office of Nuclear Energy
