GEOLOGICAL CROSS-SECTION
MATERIAL STAGING AREA

MAY 9, 1988

REV. 0
GEOLOGICAL CROSS-SECTION

The attached geological cross-section is shown to provide subsurface information concerning the geological conditions of the material staging area (MSA). The staging pad is situated over about 30 feet of clay till. This till generally has a permeability of approximately 10-7 cm/second over the site. The specifications for the MSA provides excavation and recompaction of the upper 12" to assure a permeability of 10-7 cm/sec.
