Discussion

Two sample locations are within Building 731, CG43-016 on the west side and CG43-017 on the east side. Because of the depth below ground, the floor of this building is well below the water table. It is anticipated that, based on previous experience in deeper slabs, drilling through the slab will result in groundwater inflow and prevent collection of soil samples. As discussed and agreed to, both locations will be moved outside the building and adjacent to the underground OPWL tanks. To be consistent with the Sampling and Analysis Plan for IHSS Group 700-2, samples will be collected from two intervals beginning at the interval depth that includes the base of the floor slab.

CG43-016 will be located to the west side of the underground process waste tanks and CG43-017 will be located to the east side of the underground process waste tanks. Both will be as close to B731 as practical.
