As you may recall when the shortening of the French Drain for OU 1 was proposed, EPA required some sort of mitigation for the wetlands that had been removed as part of construction. A wetlands mitigation plan was submitted but was not what EPA was looking for. EPA's desire was strictly to replace the wetlands plant life removed in approximately the same location. After discussions with Kathy London and Dick Flory it appears that an area near the site of the former wetlands is self propagating into a new wetlands with wetlands plant life re establishing. EPA has agreed that this may be acceptable mitigation if the plant life in this new wetlands area is encouraged. DOE has offered to provide EPA with a detailed description of the new wetlands area including location and plant life. Please provide this detailed description to DOE by COB June 3 1992.

Any questions should be referred to Rich Schassburger on X-4888
