Comments on the September 21 1990 Operable Unit 2 Treatability Study Plan

BY TO

J M Kersh Associate General Manager
Environmental Restoration & Waste Management
EG&G Rocky Flats Inc

The subject document consists of Volumes I through V Volume I is the Treatability Study Plan Volume II is the Sampling and Analysis Plan, Appendix A Volume III is the Treatability Study Work Plans Appendix B Volume IV is the Quality Assurance Addendum, Appendix C Volume V is the Health and Safety Plan Appendix D The attachment provides the comments on the Treatability Study Plan Draft comments and marked up copies of the subject document were provided to your staff on October 3 1990

We would like to note a concern with the overkill on documents such as this For this bench scale treatability testing there are five separate volumes over five inches thick. We feel that this document (as well as others) should be better consolidated and streamlined. The subject document could easily be reduced in volume by consolidating redundant sections

We would like to note another concern we have We see a problem with turnaround times for laboratory analysis associated with the Operable Unit 2 field treatability testing You should investigate the possibility for dedicated analysis devices for the field treatability testing that are located at the site of the treatment plant. It is important that the specific constituents of concern or indicators be analyzed in real time rather than sending samples off site for analysis so that regulatory concerns can be addressed

If you should have any questions please contact Scott Grace of my staff at 966-7199

David P Simonson
David P Simonson Acting Assistant Manager
for Environmental Management
