RE: Submittal of Draft Responsiveness Summary for the
Surface Water IM/IRA Plan for Operable Unit No. 2
WESTON Work Order No. 2029-37-01

Dear Gary:

Transmitted herewith are six copies of the Responsiveness Summary for the Surface Water Interim Measures/Interim Remedial Action Plan and Decision Document dated 26 September 1990. The time frame for completion of the draft Responsiveness Summary was not sufficient for us to provide a response to all 173 comments. However, the draft Responsiveness Summary is largely complete and a response is provided to all major issues. We will continue to provide responses to the remaining comments, and will have these for your review on Friday, 7 December 1990.

Section A of the Responsiveness Summary discusses the new proposal to defer collection of the seeps in the Woman Creek drainage until further studies are completed. This seepage will not be transported to the South Walnut Creek drainage for treatment and discharge. The rationale for this new proposal is provided in the section.

We look forward to meeting with you to discuss the draft Responsiveness Summary. Please feel free to contact me or Ciggy if you have any questions.

Sincerely,

ROY F. WESTON, INC.
