Re: Discharge notification for Rocky Flats Pond C-2.

Pre-discharge samples for Pond C-2 were collected on 9/15/11. The discharge of Pond C-2 is tentatively expected to begin the week of 10/3/11.

Pond C-2 will be direct discharged using the outlet works to Woman Creek through AMP monitoring location GS31. All required monitoring at downstream POCs WOMPOC (Woman Creek at Site boundary) and GS01 (Woman Creek at Indiana Street) will be performed according to the normal protocols in Attachment 2 to RFLMA. The discharge is expected to continue for approximately 6 days until the water level reaches the outlet valve elevation (pond volume of approximately 2%). At that point the valve will remain open and Pond C-2 will subsequently be operated in a flow-through configuration. From then on, locations GS31, WOMPOC, and GS01 will operate continuously and collect samples according to the location-specific requirements and water availability.

Pre-discharge analytical data and the final discharge schedule will accompany a subsequent notice; data are expected on or soon after 9/29/11.

Please contact me if you have questions.
